Dear customer, you have just acquired your new equipment and we thank you for it.

We have taken the greatest care, from design to manufacturing, to ensure that this equipment gives you complete satisfaction.

For a good use and an optimal availability, we invite you to read this instruction manual carefully before putting your equipment into service.

Warranty

SAMES KREMLIN grants a contractual warranty for a period of twelve (12) months from the date of availability to the Customer provided that the conditions of use indicated in this technical manual are complied with.

In order to be implemented, the warranty claim must define precisely, in writing the malfunction in question, must be accompanied by the defective Material and/or component, and must be informed of the conditions of acquisition by the Customer of the Material from SAMES KREMLIN.

SAMES KREMLIN will only accept or refuse the implementation of the warranty after analysis of the "defective" Material. The warranty granted by SAMES KREMLIN is limited to the replacement of the Material in its entirety or to the partial replacement of the defective component.

SAMES KREMLIN will only bear the cost of the parts necessary to replace the defective Material.

No guarantee will be granted by SAMES KREMLIN:

- For defects and deteriorations resulting from abnormal conditions of storage and/or conservation at the Customer's premises or for maintenance or use of the Equipment not conforming to the rules of art or not respecting the prescriptions of the present technical manual given to the Customer by SAMES KREMLIN,

- For defects and damage resulting from replacement parts not approved by SAMES KREMLIN or which the Customer, has modified,

- For all damages resulting from negligence or lack of supervision

On behalf of the Customer,

- In the event of normal wear and tear of the Equipment and/or its components or in the event of

Deterioration or accident resulting from faulty and/or abnormal use thereof.

Meanings of pictograms

			
Danger : general signal (user)	Danger: high pressure	Explosive materials	Danger: Electricity
			
Toxic materials	Corrosive materials	Harmful or irritating materials	Danger : pinching, crushing
			
Risk of product emanation	Danger: hot rooms or surfaces	Danger: automatic start, moving parts	Danger: risk of flammability
			
General Obligation	Grounding	Refer to manual/instruction leaflet	Gloves must be worn
			
Protective helmet	Hearing protection	Mandatory respiratory protection	Safety footwear
			
Protective clothing	Protective visor	Wearing of glasses is mandatory	Material recycling

Qualification of personnel

Work on the gun must only be carried out by trained and qualified personnel in accordance with the legal rules and regulations in force.

The following conditions must be met:

- Staff must have specific skills and experience in the technical field concerned. This applies in particular to maintenance and repair work on devices related to the FPro G gun.
 - The personnel must be familiar with the standards, guidelines, accident prevention regulations and operating conditions in force.
 - Personnel must have been authorized by the Safety Officer to perform the required tasks.
 - Personnel must be able to recognize and avoid potential hazards.
 - The qualifications required of the personnel are subject to different legal regulations depending on the site of implementation. The owner must ensure compliance with applicable laws.
 - Qualified personnel must be familiar with the product safety data sheets they are required to use in the operation of the FPro G.
-

1 Safety instructions

1.1 Life safety

The equipment at your disposal is for professional use only. It must be used only for the purpose for which it was intended.

Read the specified recommendations carefully:

- In the technical manuals of the equipment concerned.
- On device labels.

Misuse or improper operation can cause serious injury.

Operator training and certification

Personnel using this equipment must be trained in its use.

The workshop manager must ensure that the operators have fully assimilated all instructions and safety rules for this equipment and the other components and accessories of the installation.

Only authorized personnel will be allowed to carry out production and maintenance operations on the equipment.

(Personal Protective Equipment) - Workstation

The wearing of I.P.E. (Personal Protective Equipment) adapted to the risk situation is mandatory.

Avoid abnormal postures, maintain a stable position in order to keep your balance at all times, and therefore better control the equipment in case of unexpected situations.

Make sure the workstation is tidy and clean. Parts and tools that are scattered or piled up are sources of accidents.

Products, paints

It is forbidden to use halogenated hydrocarbon solvents and products containing these solvents in the presence of aluminum or zinc.

Failure to comply with these instructions may result in explosion hazards causing serious injury or death.

The user shall identify and prevent potential hazards inherent to the products used, such as fire or explosion hazards, and toxicity hazards with serious injuries through body contact, in the eyes, under the skin, but also through ingestion or inhalation.

In relation to the products and paints (liquid or powder) used with its equipment, SAMES KREMLIN cannot be held responsible for direct or indirect material damage caused in use, for the poor compatibility of materials in contact, for the inherent risks to personnel and the environment, for wear and tear, for malfunctions of the equipment or installations and for the quality of the finished product.

Ventilation

It is imperative that the spray booths are properly ventilated to avoid high concentrations of product, paint and to keep the LEL (Lower Explosion Limit) below.

If ventilation is turned off, toxic substances or dust may remain in the spray booth and cause a risk of fire, poisoning or irritation.

Toxicity

Depending on the product used, toxic and/or flammable vapours may form.

There is a danger of intoxication and burning associated with the concentration of these vapors.

Fire, explosion, arc, electricity

The laws and regulations in force regarding safety, fire and electricity in the country where the equipment is used must be respected.

The gun must be used in areas for which it has been validated. Refer to the ATEX section of the document.

Grounding

In general, in order to prevent the accumulation of electrostatic charges, which could generate an electric arc in a flammable and explosive environment, it is necessary that all the elements making up the system be grounded.

The gun must be "grounded" through the air or fluid hose.

The materials to be painted must also be "grounded" by means of clamps with cables or, if they are suspended, by means of hooks which must be kept clean at all times.

Always follow decompression and purge procedures when cleaning, checking, maintaining equipment or cleaning gun nozzles.

This gun is a precision tool. Its proper operation requires frequent and careful maintenance.

If it is done immediately after the job, cleaning is easier and faster.

Never use wire brushes, files or pliers for disassembly.

Before cleaning or disassembling any component of the equipment, it is imperative that:

- Decompress the hoses by pulling the trigger.
 - Do not store more flammable products than necessary inside the work area.
-

These products must be stored in approved and grounded containers.
Use only grounded metal pails for the use of rinsing solvents.

Cardboard and paper are to be banned. Indeed they are very bad conductors, even insulators.

The canisters of products and cleaners must be grounded, via the grounding cable, using clamps or any other means of attachment.

The parts to be painted are hung or placed by means of grounded hooks or supports and kept clean at all times, in order to always guarantee a good conductivity to the ground.

All insulation (cardboard, paper, plastic materials) must be kept to a minimum in the work area.

Ground continuity must be checked by a qualified electrician.

Never operate the equipment without first ensuring that all the above provisions are met.

Pressure

The use of pressurized air and products (paints or solvents) presents risks for the user and the equipment.

Never exceed the maximum working pressures of equipment, components and accessories.

It is imperative to follow the procedures for decompression, shutdown and logging of pressure energies, elimination of residual energies and purging of fluids, for any cleaning, inspection, maintenance of the equipment.

Surfaces, edges, corners

Some component surfaces may be hot during operation.
Skin contact with hot surfaces will cause severe skin burns.

Handle open or sharp-edged components with care. Wear protective gloves.

1.2 Integrity of the material

Equipment modification

Under no circumstances should our equipment be modified or used in unintended cases of use.

Parts and accessories must be exclusively supplied or approved by SAMES KREMLIN.

SAMES KREMLIN cannot be held responsible for personal injury as well as breakdowns and/or damage resulting from modification of the equipment. Any modification of the equipment made by the user and not authorized by SAMES KREMLIN will result in loss of certification.

Environment

Environmental risks must be controlled as follows:

- Respect an average temperature of use of the equipment and products, which must be at least 5°C lower than the flash point of the products and within a range of 0 to 40°C.
 - Ventilation of the area by forced extraction and supply of unpolluted air shall be mandatory during equipment operation or cleaning operations.
 - Fragile parts of the installation, especially flexible hoses, must be protected from mechanical or thermal damage during production or maintenance.
 - Waste related to the operation or dismantling of the equipment must be treated in accordance with the laws in force.
-  - The noise level of our equipment is limited to the maximum, however the operators will have to be protected according to the overall noise level of the environment. Depending on the operating conditions, the sound pressure of the equipment may cause hearing problems. Take appropriate measures to reduce noise pollution.
- Dispose of packaging materials in a proper and environmentally friendly manner.
-

FR

Pour une utilisation sûre, il est de votre responsabilité de :

- D'installer, d'utiliser, d'entretenir et de réparer l'équipement conformément aux préconisations de SAMES KREMLIN ainsi qu'aux réglementations nationales et/ou locales,
- Vous assurez que les utilisateurs de cet équipement ont été formés, ont parfaitement compris les règles de sécurité et qu'ils les appliquent.

ES

Para una utilización segura, será de su responsabilidad:

- instalar, utilizar, efectuar el mantenimiento y reparar el equipo con arreglo a las recomendaciones de SAMES KREMLIN y a la normativa nacional y/o local,
- cerciorarse de que los usuarios de este equipo han recibido la formación necesaria, han entendido perfectamente las normas de seguridad y las aplican.

NL

Voor een veilig gebruik dient u:

- het apparaat te installeren, gebruiken, onderhouden en repareren volgens de door SAMES KREMLIN gegeven aanbevelingen en overeenkomstig de nationale en/of plaatselijke reglementeringen,
- zeker te stellen dat de gebruikers van dit apparaat zijn opgeleid, de veiligheidsregels perfect hebben begrepen en dat zij die ook toepassen.

PL

Dla zapewnienia bezpiecznego użytkowania na użytkowniku spoczywają obowiązek:

- Instalowania, użytkowania, konserwacji i naprawy urządzeń zgodnie z zaleceniami firmy SAMES KREMLIN oraz z przepisami miejscowymi,
- Upewnienia, że wszyscy przeszkołeni użytkownicy urządzenia zrozumieли zasadę bezpieczeństwa i stosują się do nich.

SK

V záujme bezpečného je vašou povinnosťou:

- nainštalovať, používať, udržiavať a opravovať zariadenie v súlade s odporúčaniami spoločnosti SAMES KREMLIN a národnými a/alebo miestnymi predpismi,
- uistíť sa, že používateľia tohto zariadenia boli zaškolení, riadne porozumeli pravidlám bezpečnosti a používajú ich.

4.4.1 Description of the ATEX marking

Each device is marked with the name of the manufacturer, the reference of the device and important information for the use of the device (air pressure, electrical power, etc.).

This equipment has been designed in accordance with the ATEX 2014/34/EU directive and is intended for use in Zone 1.

		Description
Acronym SAMES KREMLIN		Manufacturer's brand name
FPro		Gun model
EC		EC : European Conformity
		Ex : Use in explosive areas II : group II 2 : category 2 Surface equipment intended for an environment in which explosive atmospheres due to gases, vapours, mists are likely to occur occasionally during normal operation. G : Gas
Ex h IIB T6		Ex Marking of conformity to European standards h : Type of protection for non-electrical appliance IIB : Reference gas for equipment qualification T6 : Temperature class - Maximum surface temperature: 85°C*.
Gb		Gb : Equipment protection level (zone 1 gas)
X		Special conditions apply for safe use. Refer to the requirements in the instruction manuals accompanying this product.
20XX		Number given by SAMES KREMLIN. The first two digits indicate the year of manufacture.
P air : 6 bar / 87 psi		Max. air supply pressure of the gun
P prod : 6 bar / 87 psi		Max. fluid pressure at gun inlet
PATENT PENDING		Patent pending on Vortex technology

(Measured in water with 590 ml in the cup and 2.2 b of air).

HVLP-Lvb head

Nozzle	12	13	14	15	18	22
Flow rate	170 cc	200 cc	226 cc	235 cc	278 cc	305 cc

(Measured in water with 590 ml in the cup and 2.2 b of air).

5.2 Performances

Excellent spray quality: Vortex technology .

Ergonomics studied for a better grip (Improved grip and trigger design)
Very low trigger force: magnetic assistance

Reduced weight

Easy to clean: body design with smooth and polished walls + materials used + use of anti-drip membrane in the cup to protect the lid during spraying.

Possibility to spray viscous products up to 3000 CP with the GSP version and with a product pressure of 1 bar.

5.3 Principle of operation

The FPro G is a pneumatic spray gun. A tool that ensures the projection and spraying of paint (or other liquid products: glue) only thanks to a compressed air supply in more or less large quantities, and under a pressure between 1 and 6 bars.

The product is gravity fed from the cup (rigid or disposable). In the GSP version, the product is fed by putting the cup under pressure (0 to 1 bar) in order to allow the spraying of more viscous product.

The gun includes:

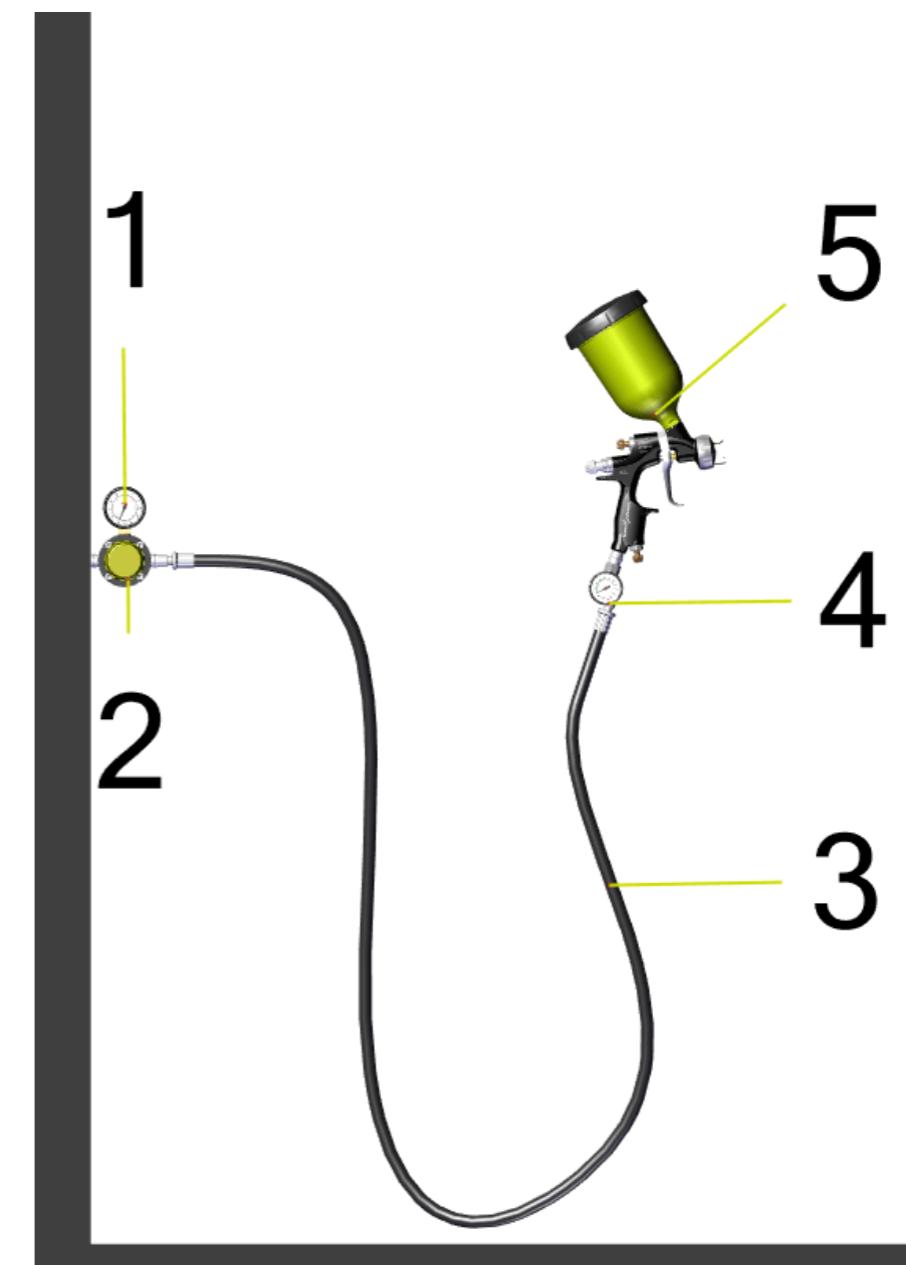

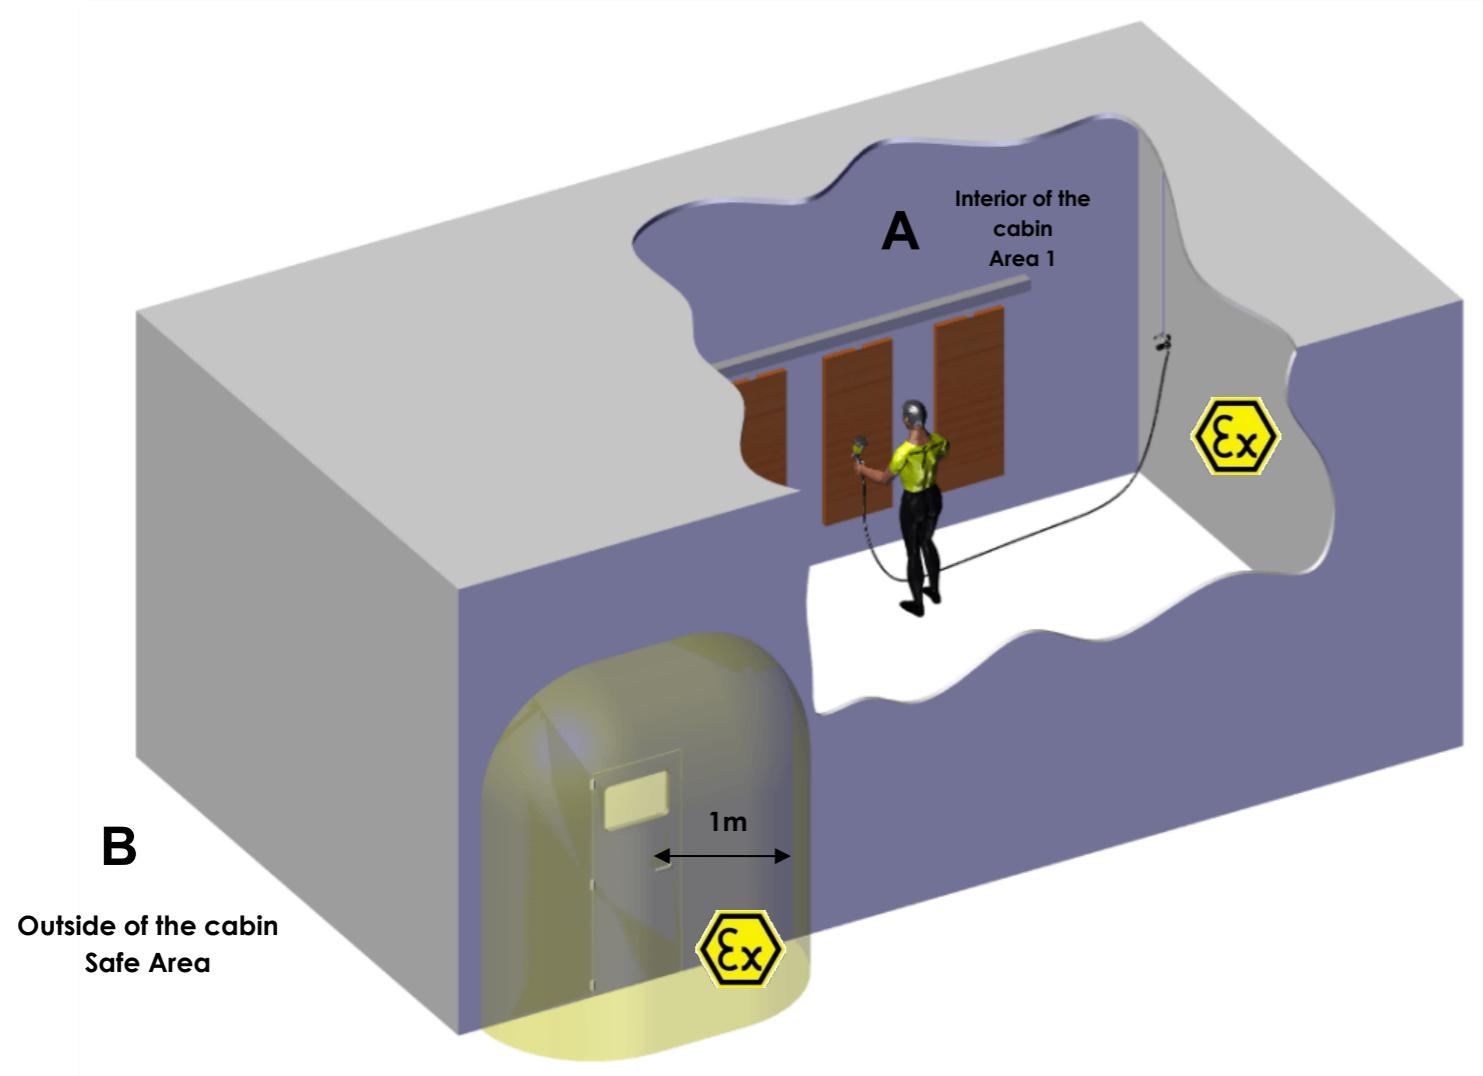

- A paint supply tank,
- A pipe bringing the paint to the head of the gun,
- A pipe for pressurized air
- A spray head for droplet formation

Several adjustments are available onto the gun in order to optimize the spraying process:

- Adjustment of the general air flow rate
 - Adjusting the fluid flow rate :
 - Product needle stroke.
 - Nozzle size installed.
 - Adjusting the spray width.
-

6 Installation

6.1 General Installation Diagram

A- Explosive area 1 (A1) or area 2 (A2): paint booth

B - Non-Explosive Zone

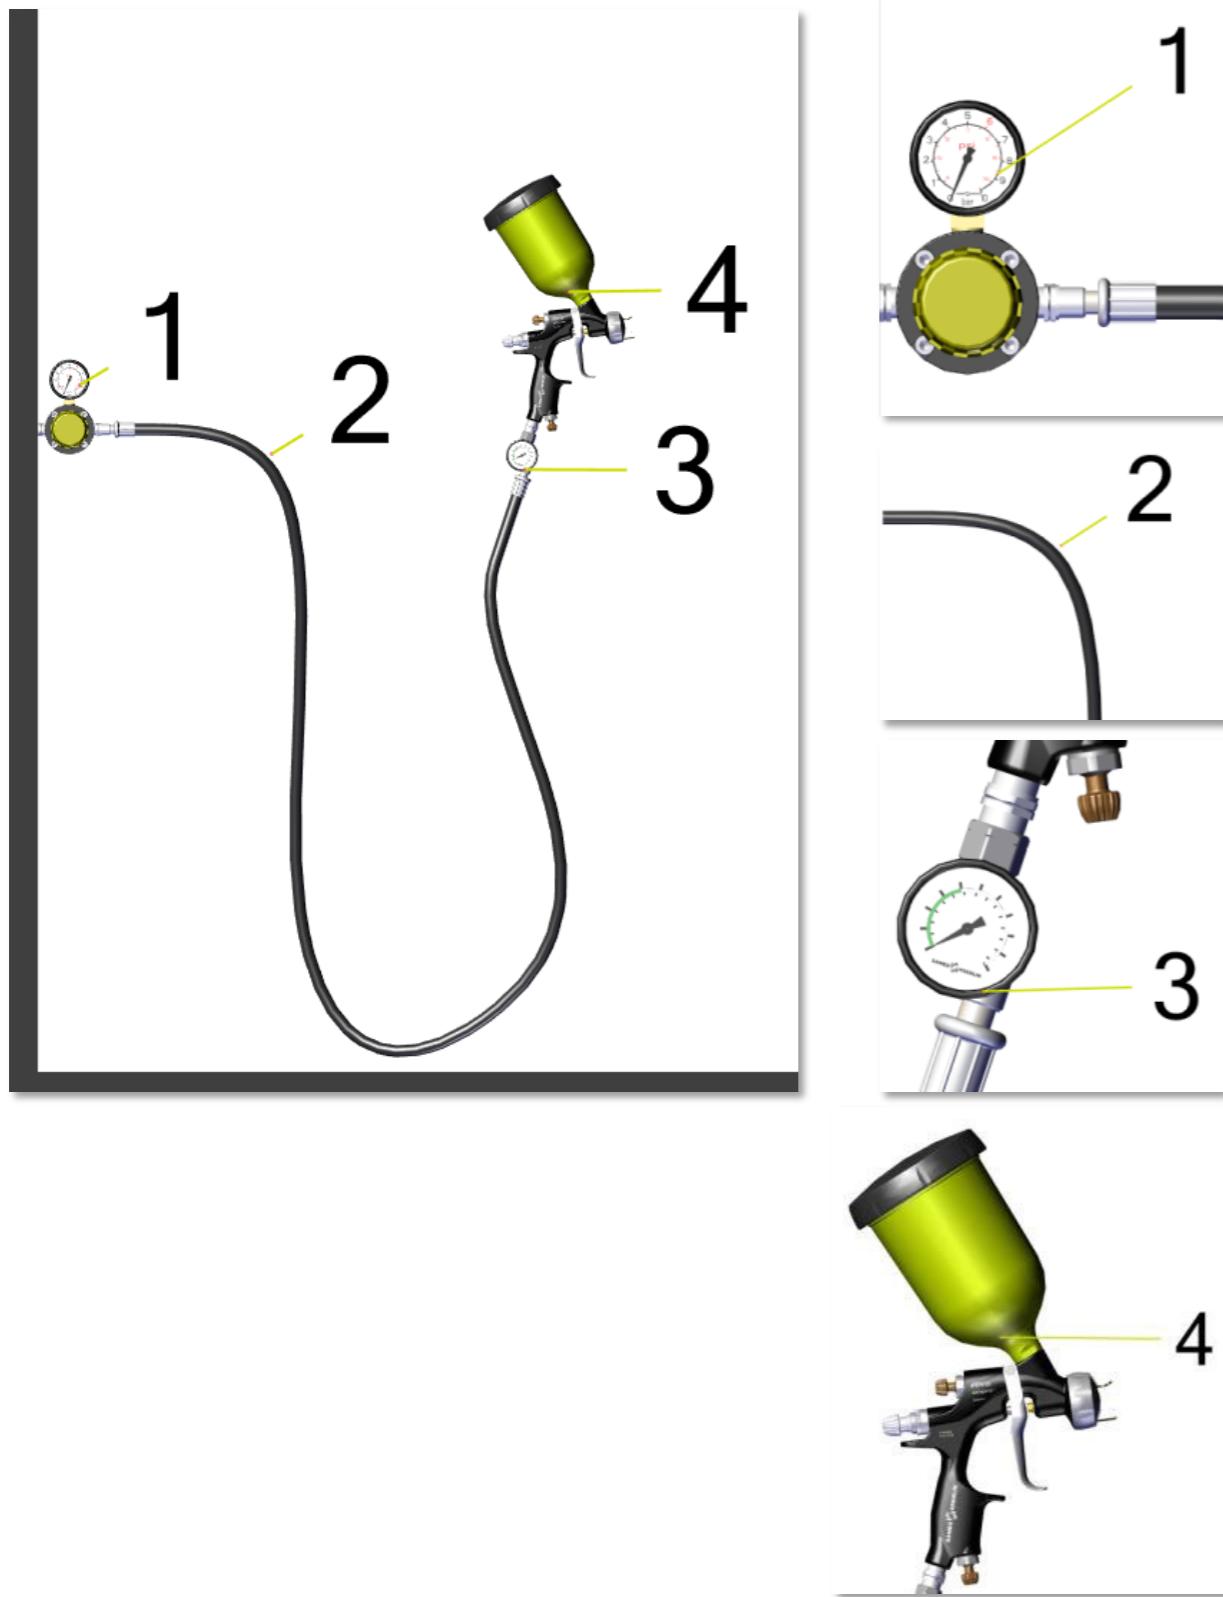

The distance of 1 meter mentioned in this diagram is given only as an indication and could not engage the responsibility of SAMES KREMLIN.

The exact delimitation of the areas is the express responsibility of the user, and this according to the products used, the environment of the equipment and the conditions of use.

This distance of 1 meter can thus be adapted if the analysis carried out by the user requires it.

Using an antistatic quality hose, connect the gun to an air pressure regulator capable of supplying a minimum of 2 bar, a maximum of 6 bar.

6.2 Installation Diagram - Air Pressure Adjustment with or without Gauge at Gun Handle

1- Air pressure regulator and wall pressure gauge PO

2-Air hose

3 - Pressure measured at the gun grip during operation (air needle open)

4 - Gun FPro G

6.3 Transport

Put the product in its original packaging during transport.

The packaging of the gun corresponds to the transport conditions provided for this purpose.

The packaging protects:

- Damages related to transportation.
 - Corrosion.
-

6.4 Storage

Our equipment must be stored in its original packaging.

In case of prolonged storage, it is preferable to carry out preventive maintenance for all lubricants before commissioning.

Storage before installation

Storage ambient temperature 0 / +50 °C.

- Protect against dust, water runoff, moisture, vibration and shock.
- Only remove the packaging just before assembly.

Storage after installation

- Protect against dust, water runoff, moisture and shock.
-

7 Commissioning

Intervening staff: qualified personnel.

- Take into account the safety instructions of the sprayed product.
 - Wear suitable PPE (ear protectors, mask, gloves, goggles, safety shoes.).)
 - Check the correct operation of the pressurized air production system
 - Verify the proper operation of the air extraction system.
 - Use measuring equipment that is certified, monitored and complies with ATEX regulations.
 - Do not immerse the gun in solvents or aggressive products.
 - Do not clean or immerse the GSP kit in solvents or aggressive media.
 - Do not clean with wire brushes.
 - Use only antistatic wipes for cleaning the equipment.
 - Use only genuine SAMES KREMLIN spare parts and accessories.
-

7.1 Apply a product on a surface

- Select the right fitting for your installation

Original equipment	Option	Connection	$\frac{1}{4}$	BSP
Connection $\frac{1}{4}$ NPS		(included in the accessories box)		

- Connect the air hose.
- Check the proper operation of the gun without any product and make a pre-setting of the supply pressure.
- Put the gun on its support .
- Fill the cup using a suitable filter.
- Put on the anti-drip membrane and close the cup.
- Perform spray tests on a test surface.
- Adjust the setting parameters to optimize spraying.
 - Air pressure and flow rate.
 - Fluid flow rate (needle stroke, nozzle size or pressure in the cup (in case of GSP version only)
 - Spray width
- Apply the product on the work piece.

7.2 Short stop of the gun

- put the gun on its adapted support

7.3 Prolonged shutdown of the gun

- Turn off general air
- Disconnect the gun
- Empty the cup.
- Cleaning the gun
- Put the gun away.

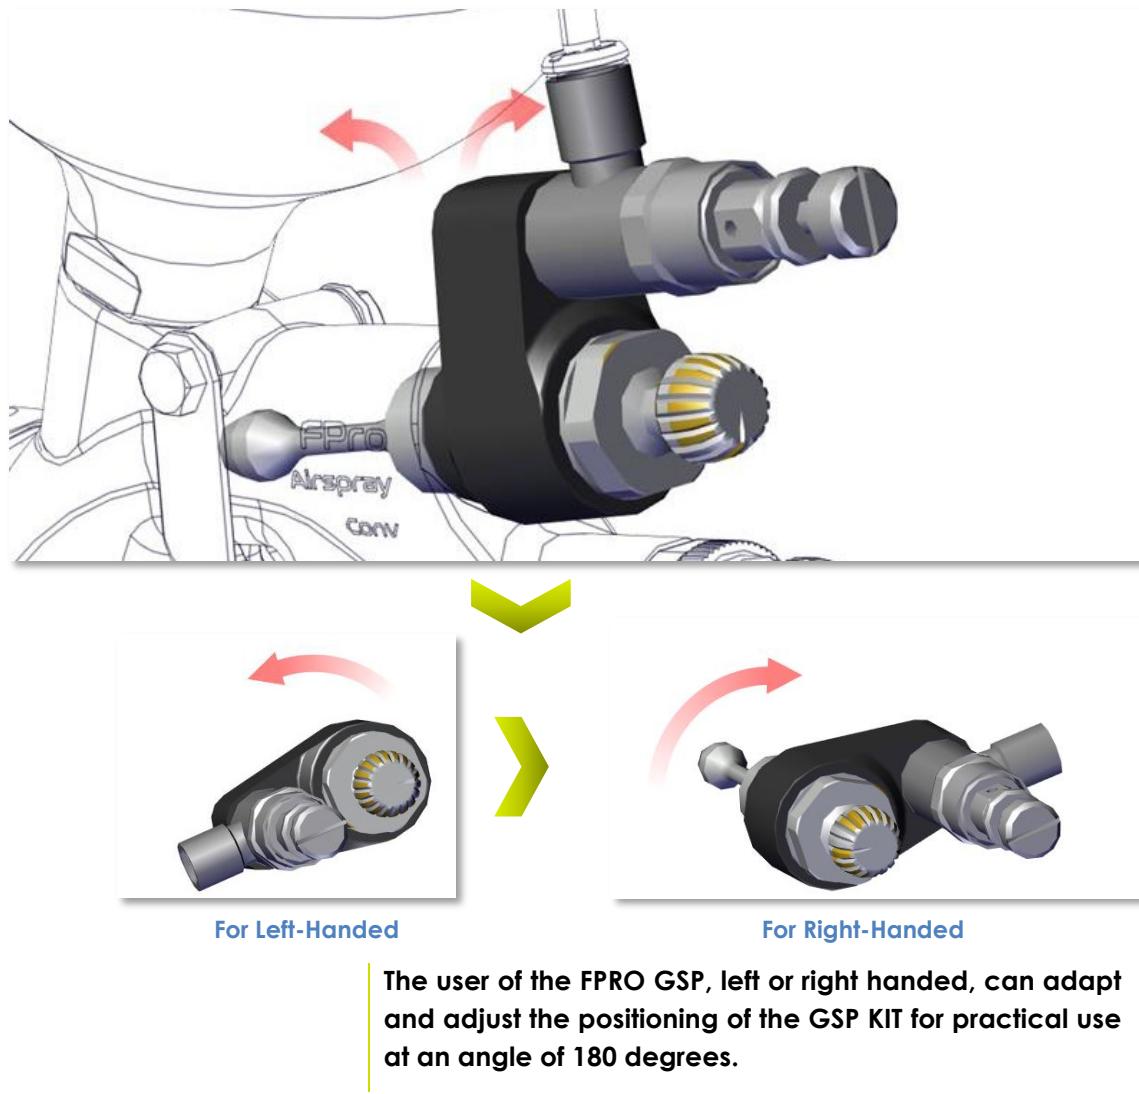

7.4 User settings

See paragraph: 6.1 General Installation Diagram .

7.4.1 Ergonomic GSP position adjustment for right-handed and left-handed users

7.5 Initialization of the follow-up in production

Identify the gun in the material tracking system.

- Set up a preventive maintenance program if necessary.
Refer to (10.110.1 Preventive Maintenance Plan).
-

7.6 Safety in production

Respect the maximum recommended pressures:

- 6 bar max. in the gun.
- 1 bar max. in the GSP cup.

Do not point the gun at yourself or anyone else while spraying

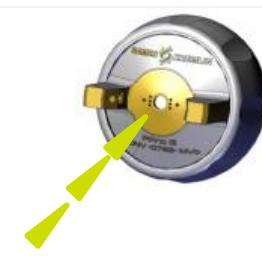

Use an adapted and ATEX-certified conductive air hose.

8 Use of the FPro G

First commissioning

Refer to paragraph: 7 Commissioning

9 Diagnostic Help / Troubleshooting Guide

Topic	Explanation	Visual
Bean-shaped spray	<p>The defect comes from the head: loosen the ring slightly and rotate the head half a turn. If the defect is reversed, one of the side vents is blocked or deformed.</p> <p>Then clean the gun head with solvent and unclog the vents with a spray of compressed air. If this does not reverse, the nozzle is probably damaged.</p>	
Deported spray	<p>This deformation is due to a defect in the central spray. It is necessary to clean the head as described above and the nozzle. Also check that :</p> <ul style="list-style-type: none"> • The head is well centered on the nozzle, • The nozzle is not too big (needle and nozzle must be adapted), you work with a sufficient needle opening. • With an almost closed needle, the product supply to the spray is not regular in all directions. 	
Cutted spray	<p>The pressure of the air sprays at the vents is too high for the paint flow:</p> <ul style="list-style-type: none"> • Reduce air at the vents by closing the adjustment needle. The spray is narrower. • Increase paint flow. 	
Spray loaded in the center	<p>Default inverse of the previous one :</p> <ul style="list-style-type: none"> • Either the paint flow rate is excessive for the adopted spraying air pressure: you should increase the spraying air pressure and reduce the paint flow rate. • Either the paint is too thick: you must then dilute it. 	
Jerky product spray	<p>The Gun is machine-gunned. The phenomenon is caused by air entering the paint circuit:</p> <ul style="list-style-type: none"> • The container containing the paint may be empty: refill with paint. • The nozzle is not tightened properly and does not fit properly on its seat: tighten the nozzle. <p>If the phenomenon persists, disassemble the nozzle and clean it.</p> <ul style="list-style-type: none"> • Check the nozzle seat and cone for damage, reassemble and secure the nozzle. • Check that the paint is fluid and homogeneous enough to be vacuumed. 	

9.1 Possible symptoms of faults - Causes of faults - Remedies to apply

Defaults	Root causes	Remedies
<ul style="list-style-type: none"> Paint no longer comes out of the gun 	<ul style="list-style-type: none"> Nozzle partially or completely clogged 	<ul style="list-style-type: none"> Disassemble and clean the nozzle with solvent and a smooth brush Check the condition of the seal.
<ul style="list-style-type: none"> The spray narrows at pump reversals. The head frequently gets dirty The paint comes out through the air holes in the head. Product leakage at the trim level 	<ul style="list-style-type: none"> Viscosity too high. Too much air. Defective nozzle seal. Insufficiently tight nozzle Worn seal. 	<ul style="list-style-type: none"> Dilute the paint. Reduce air pressure. Replace it. Tighten it. Tighten the liner press without blocking the needle. If the leak is still present, replace the seal and needle.
<ul style="list-style-type: none"> Product leakage at the front of the gun, trigger released 	<ul style="list-style-type: none"> Impurities in the product Worn out needle or/and worn out nozzle 	<ul style="list-style-type: none"> Pull the trigger 3 or 4 times and let it go back on its own. Replace the needle and/or nozzle.
<ul style="list-style-type: none"> Air leakage at the valve 	<ul style="list-style-type: none"> Worn valve 	<ul style="list-style-type: none"> Changing the valve
<ul style="list-style-type: none"> Permanent air leakage at the gun head when trigger is released 	<ul style="list-style-type: none"> Rubbing on the needle Worn valve 	<ul style="list-style-type: none"> Remove the trigger and check that the needle slides freely. Replace the valve.

10 Maintenance

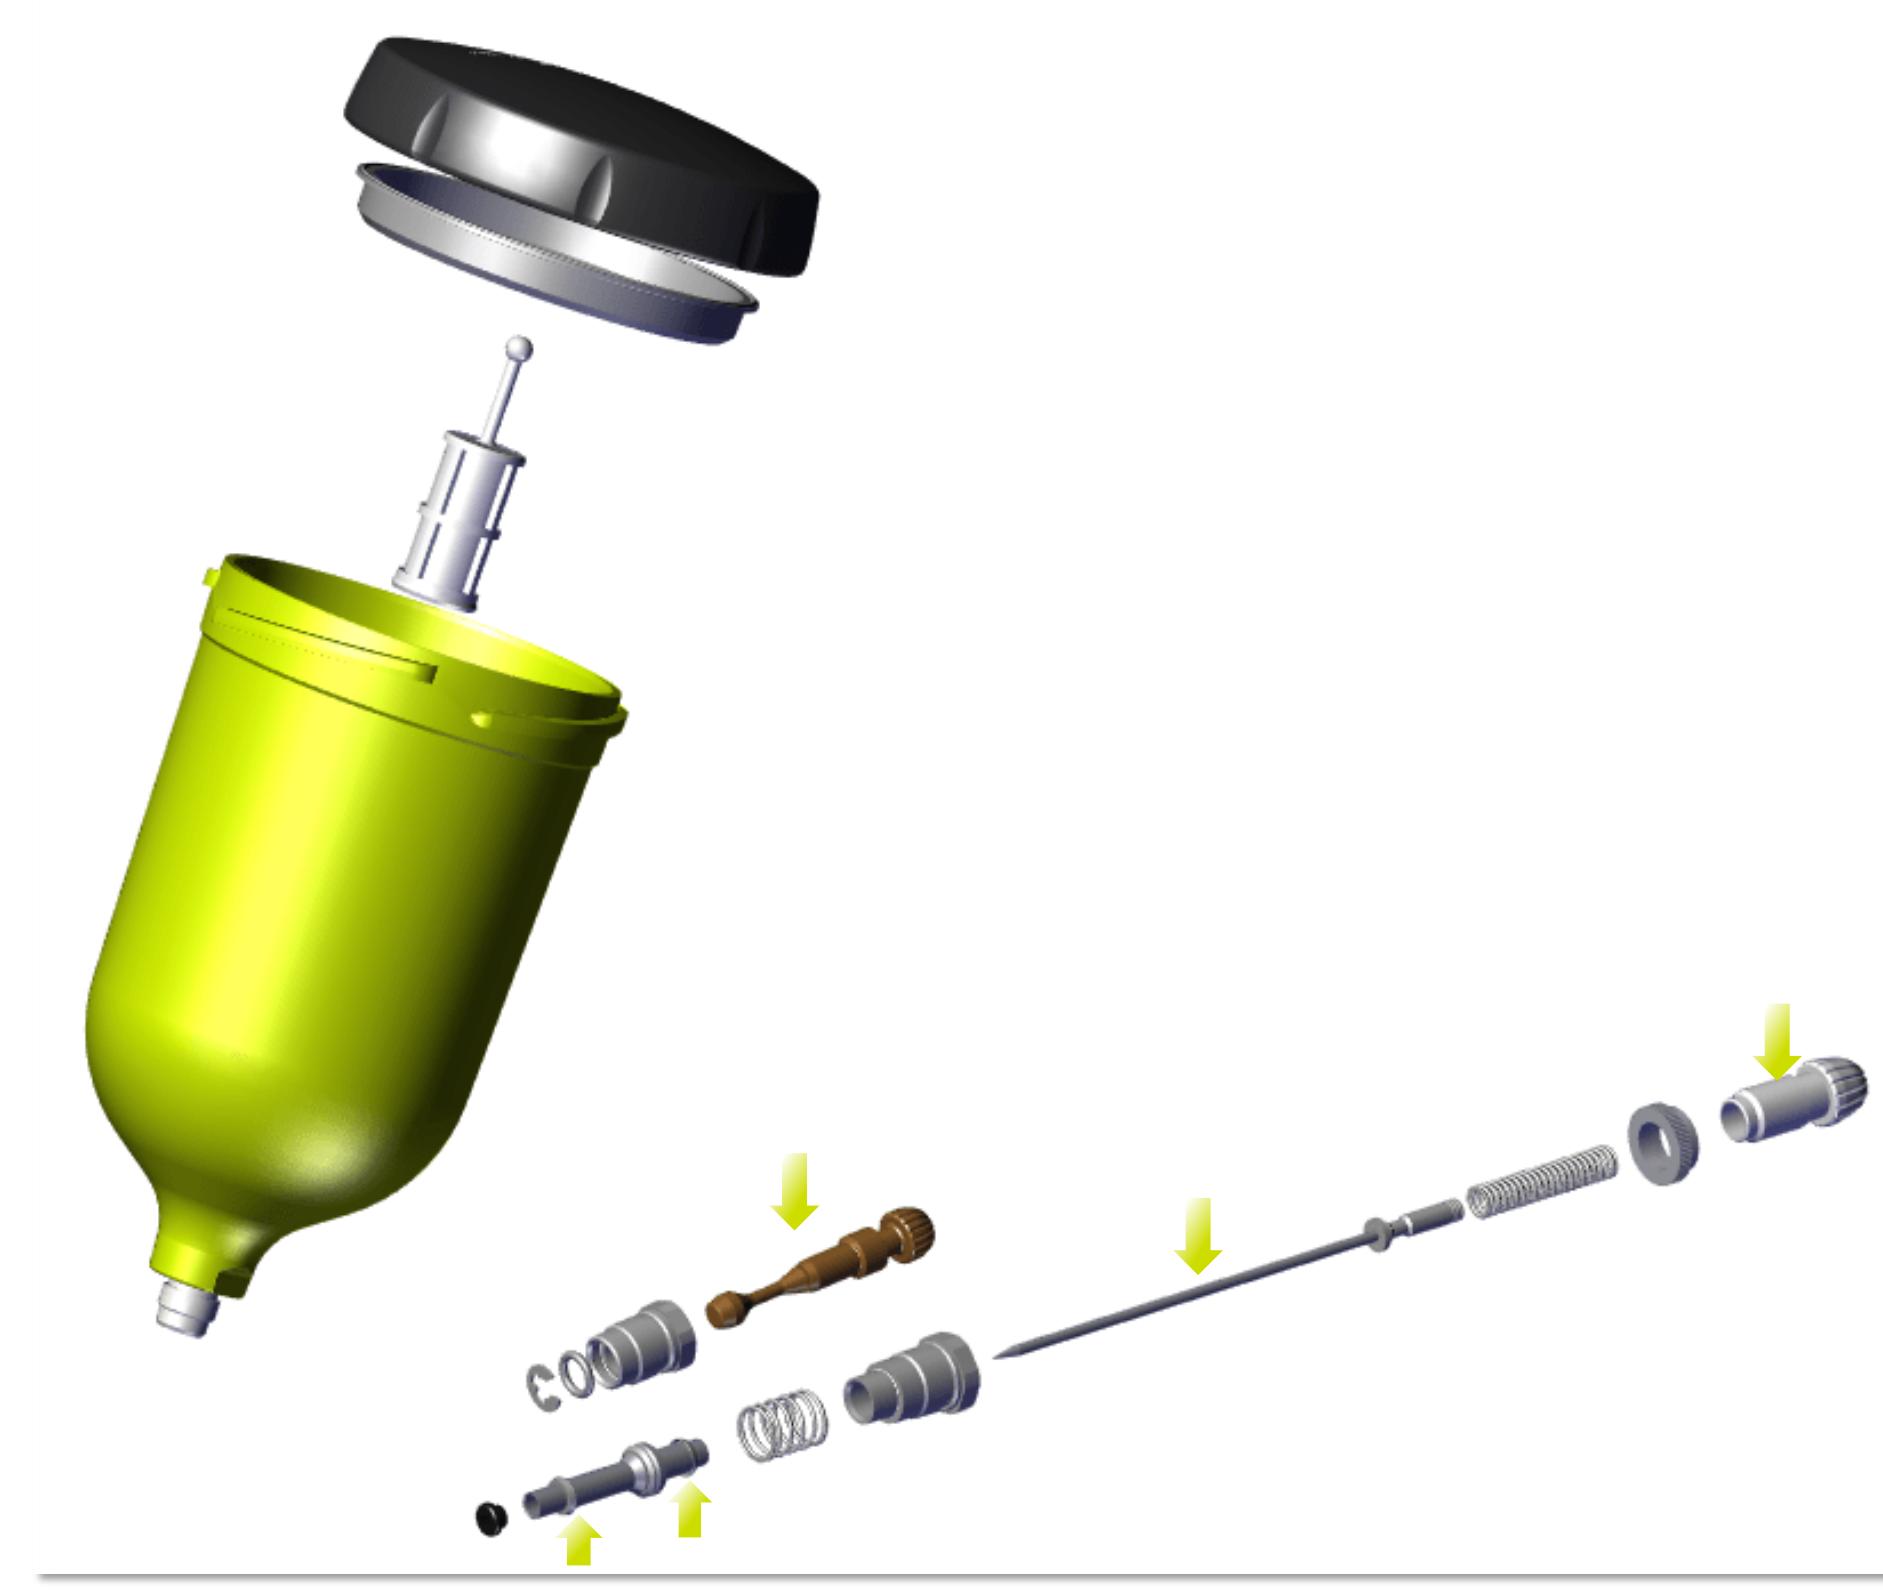

10.1 Preventive Maintenance Plan

Maintenance plan								
Equipment		Type of maintenance	Condition of the equipment	Operation			Intervening staff	Reference elements necessary for maintenance (range, manual, QR Code)
Sub-assembly	Element			Wording	Periodicity			
General installation	General	SM	ON	Visual inspection of the installation. Check for leaks. Check that the hoses are not pinched.	D	OPER

10.1.1 Location of lubrication points - FPro G - FPro GSP

FPro G

Location of lubrication points - FPro G - FPro GSP (continued)

FPro G SP

560440001 : PTFE grease 450 GR. box
560440101 : 10 ML GREASE PTFE CARTRIDGE

10.2 Cleaning

Clean gravity cup

The gravity cup is made of special antistatic materials.

Do not create electrostatic charges by friction.

Use only a damp cloth or antistatic wipes if manual cleaning is required in a hazardous area.

10.3 Corrective maintenance

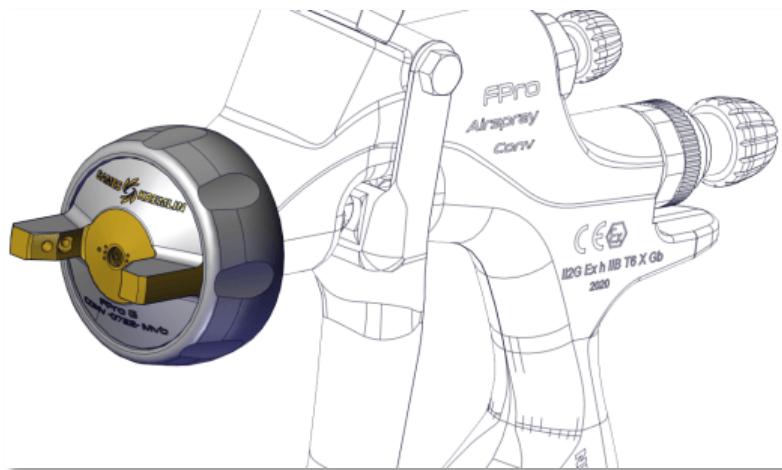

Replace hoses if worn.

Replace seals in case of wear or leakage.

10.4 Disassembly/Re-assembly operation

10.4.1 Dismantle the FPro G

Unscrew the projector

Objectives

Procedure to be carried out within the framework of maintenance.

Reminder: Assembly errors

The use of improper replacement or defective parts may result in hazards to personnel, damage, malfunction or general shutdown of the equipment.

Intervening staff

Qualified personnel.

Prerequisite

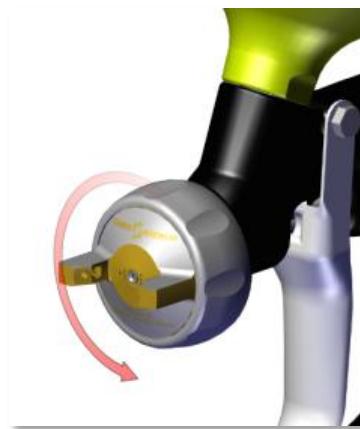

Before cleaning or disassembling any component of the equipment, it is imperative that:

- To cut off the compressed air supply,
- Decompress the hoses by pulling the trigger.

Step 1

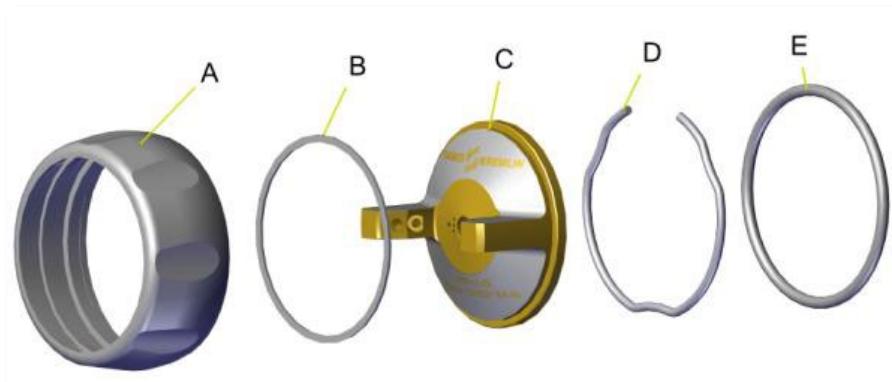

Unscrew the complete head and remove it

Step 2

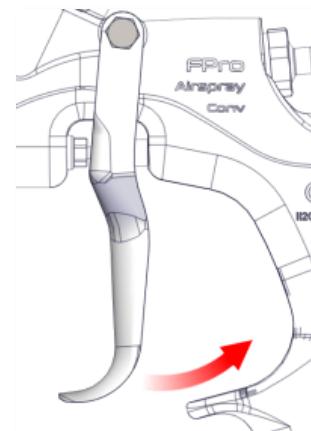

Remove:

1. The ring seal (A).
2. The friction seal (B)
3. The bare head (C).
4. The retaining ring (D).
5. The head ring seal (E).

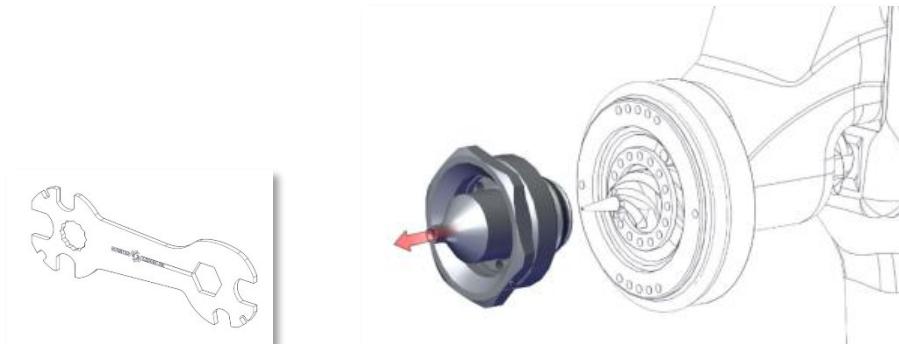

Step 3

Pull the trigger.

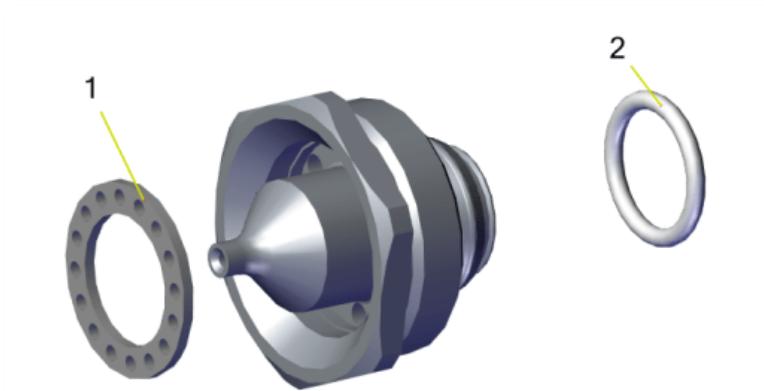

Step 4

Unscrew the nozzle equipped with the wrench supplied with the gun.

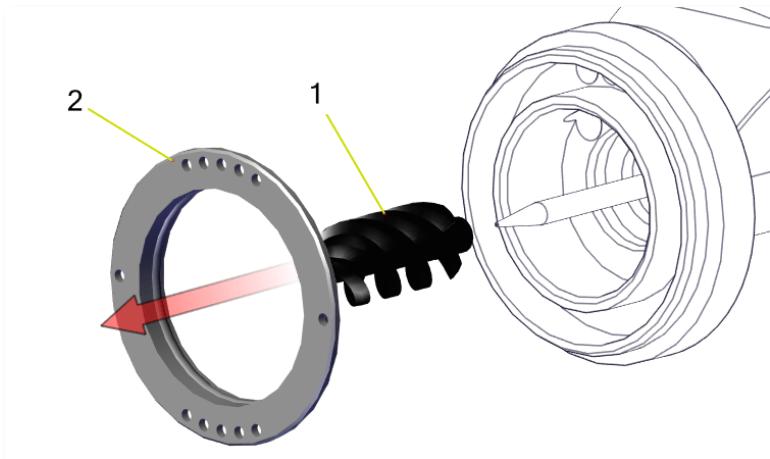

Step 5

Remove the distribution ring (1) and the nozzle seal (2).

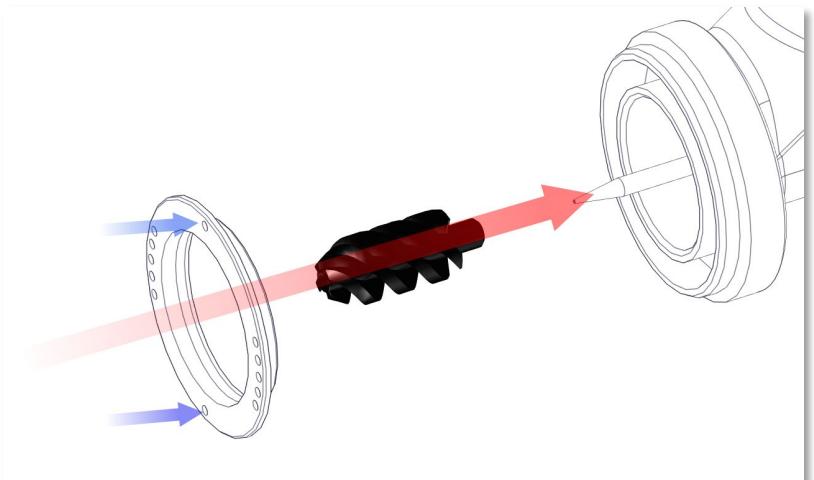

Step 6

Remove the vortex (1) and distribution ring (2).

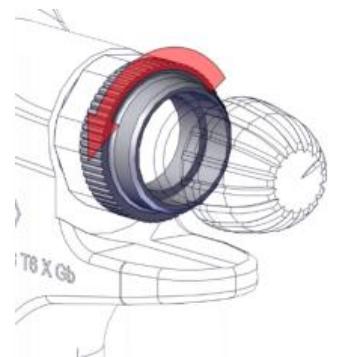

Observe the alignment of the ring position along the axis of the figure below for reassembly.

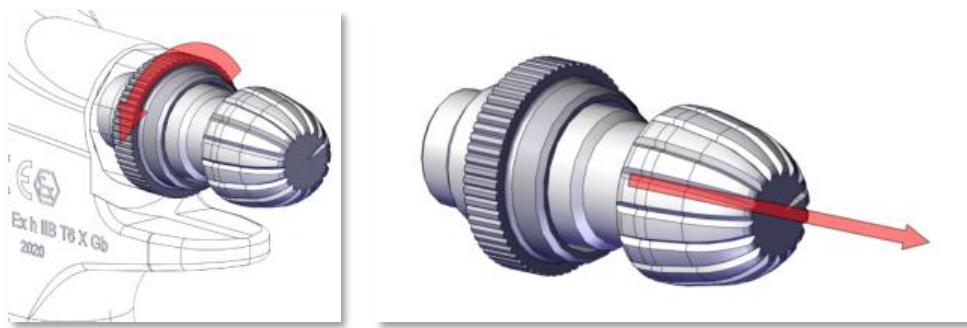

Step 7

Loosen the nut.

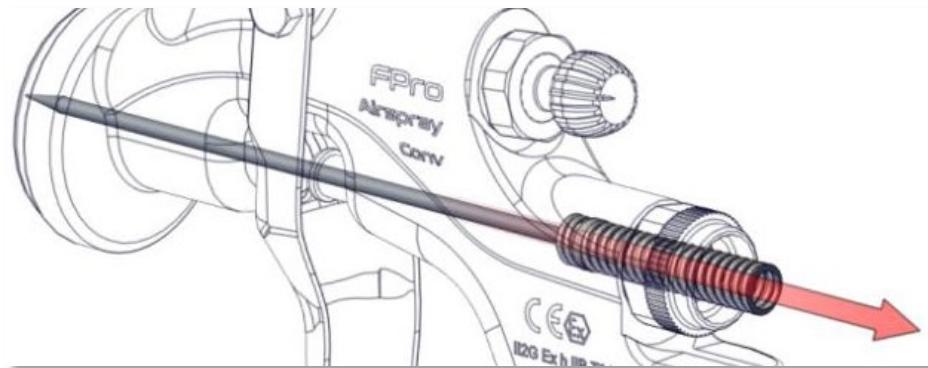

Step 8

Unscrew and remove the needle stop.

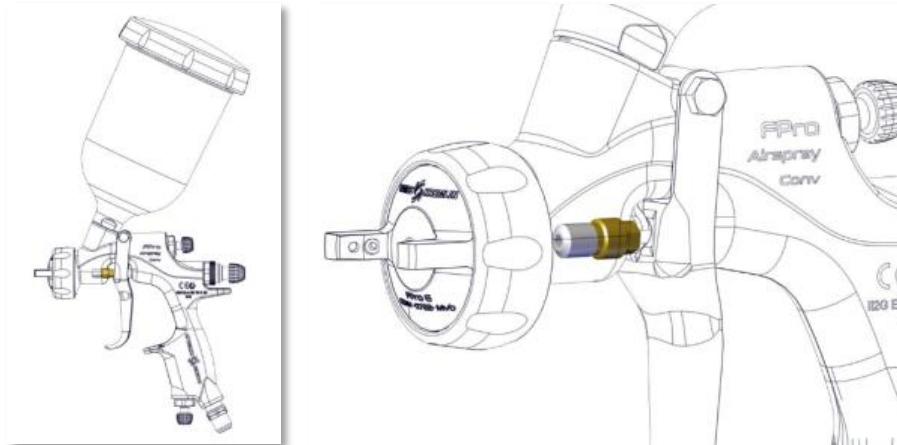

Step 9

Remove the needle spring and the needle from the back of the gun.

10.4.2 Replace needle packing

Objectives

Procedure to be carried out within the framework of maintenance.

Ensure tightness between the needle and the body of the gun.

Intervening staff

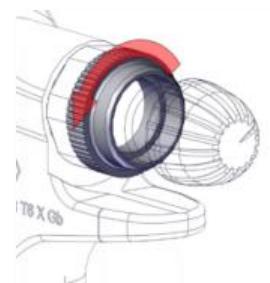

Qualified personnel.

Step 1

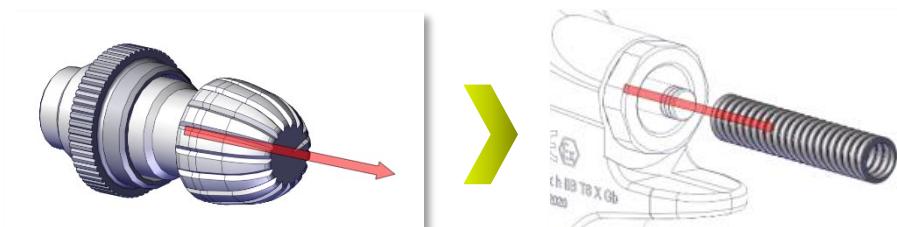

- Check that there is no more product in the cup and in the gun.
- Rinse the gun and the cup.
- Dry the gun and the cup.

Step 2

Loose the nut.

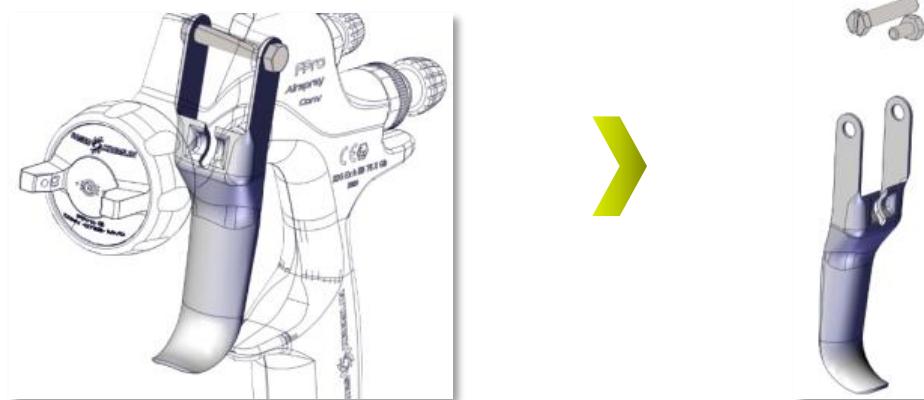

Unscrew and remove the needle stop. Remove the needle spring and the needle.

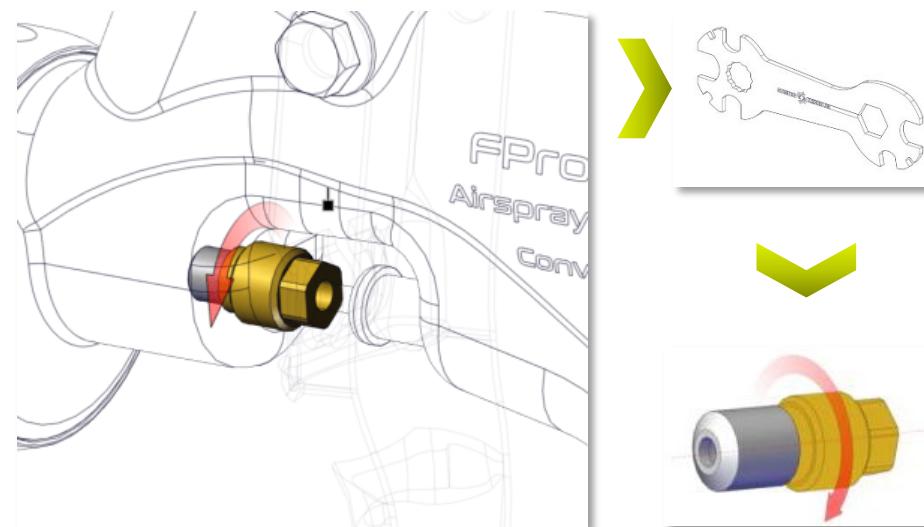

Step 3

Remove the trigger by removing the screw and trigger pin with two 5.5 wrenches.

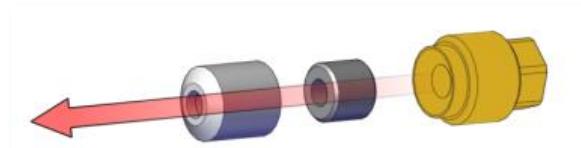

Step 4

Unscrew the liner press using the key supplied with the gun.

Step 5

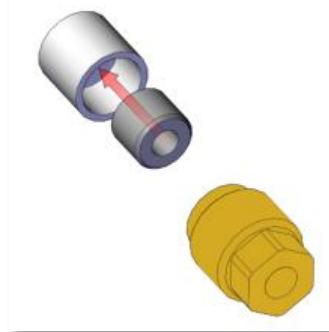

Pull out the needle packing which consists of a seat and a bearing.

Step 6

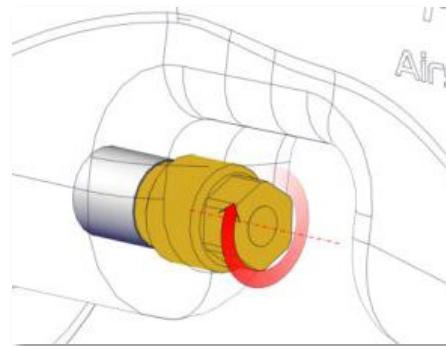

Reassemble the new filling.

Insert the bearing into the seat and place the new assembly into the gun.

Step 7

Screw on the packing press loosely.

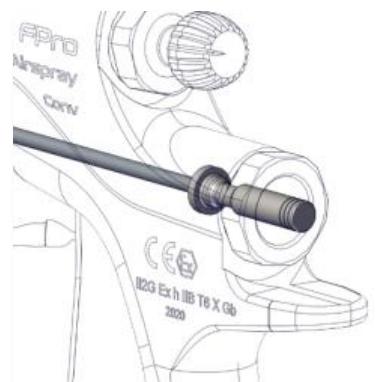

Step 8

Grease the needle.

560440001 : PTFE grease 450 GR. box
560440101 : 10 ML GREASE PTFE CARTRIDGE

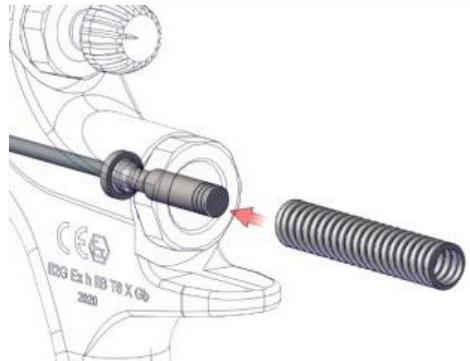

Step 9

Reassemble the needle.

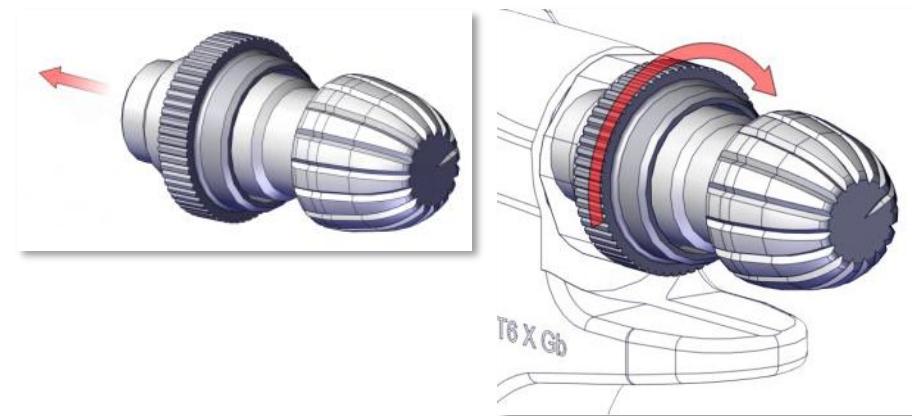

Step 10

Reassemble the needle spring and the needle stop.

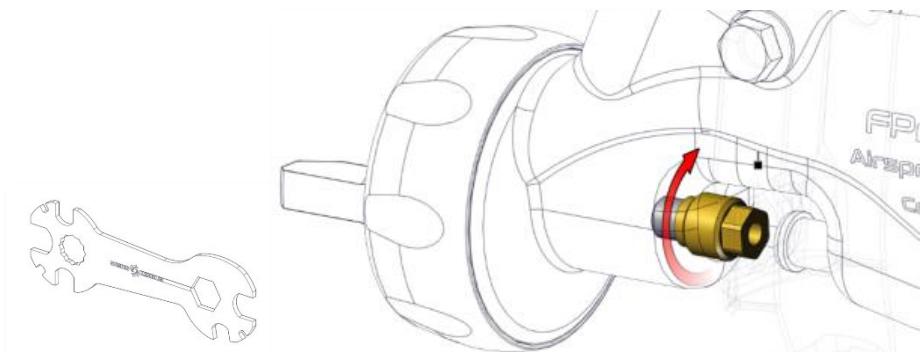

Step 11

Tighten the nut.

Step 12

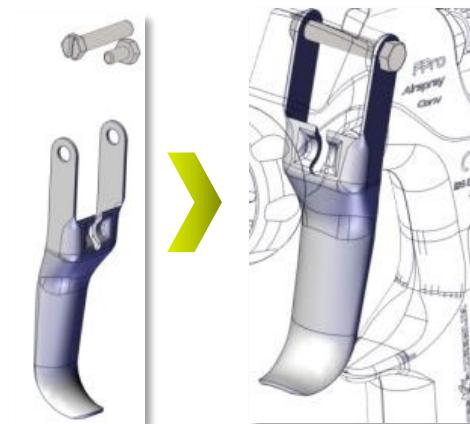

Fully tighten the liner press with the key supplied with the gun and unscrew by a quarter turn.

Note: If leakage is present, tighten slightly at the packing press.

Step 13

Raising the trigger

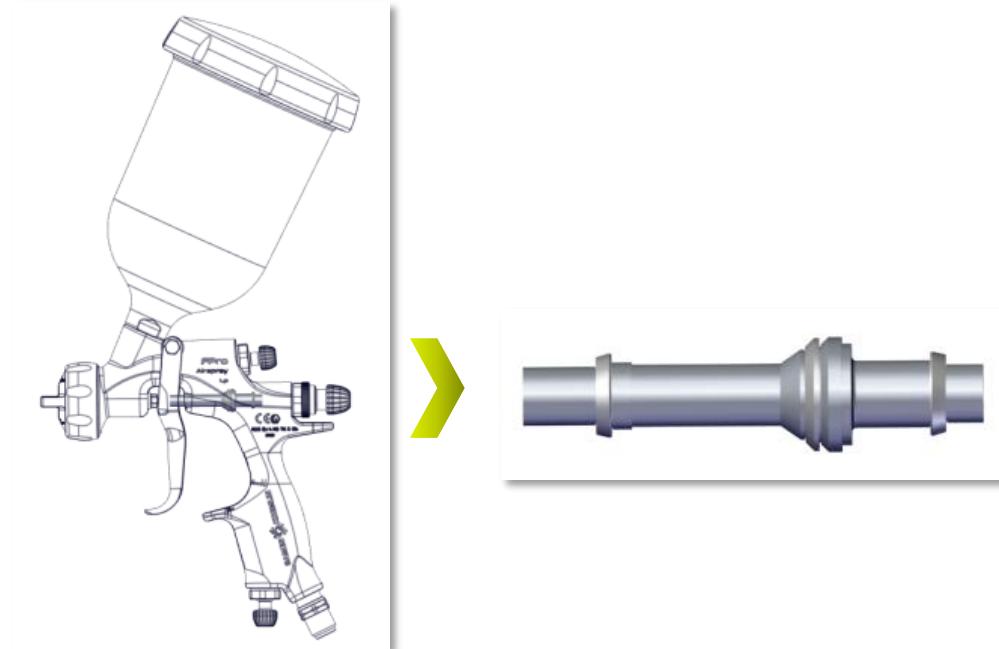

Step 14

Feed in air and product.

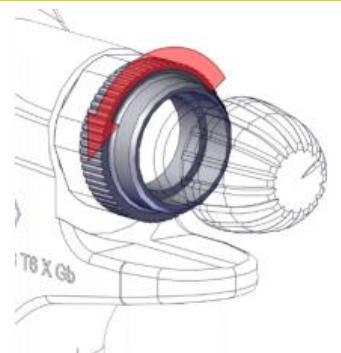

10.4.3 Replace air valve

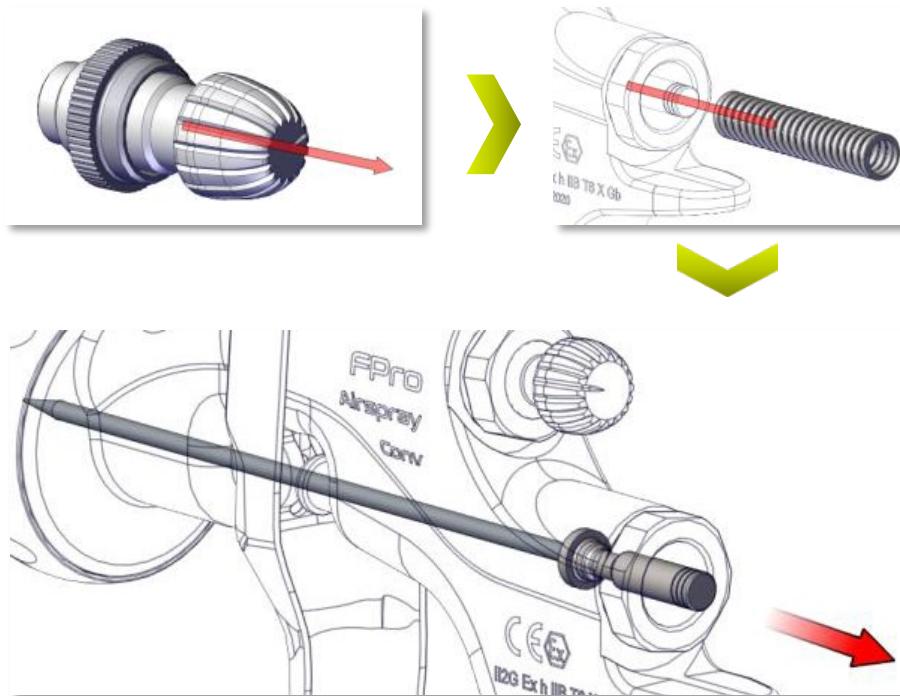

Step 1

Loosen the nut.

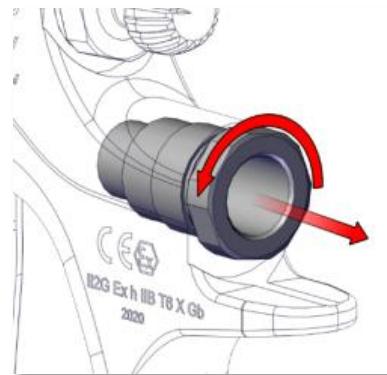

Step 2

Unscrew the needle stop, then remove the needle spring and needle from the back of the gun.

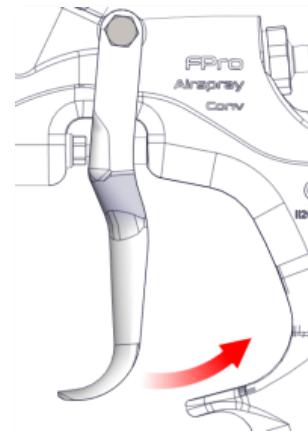

Step 3

Activate the trigger and unscrew the liner with the key supplied with the gun.

Step 4

Squeeze the trigger to move the valve.

Step 5

Extract:

- The valve spring,
- The air valve,
- The liner.

Step 6

Reassemble the liner on the new air valve.

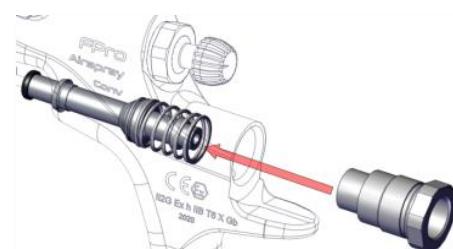

Step 7

Reassemble the liner on the new air valve.

Grease the valve seals.

560440001 : PTFE grease 450 GR. box

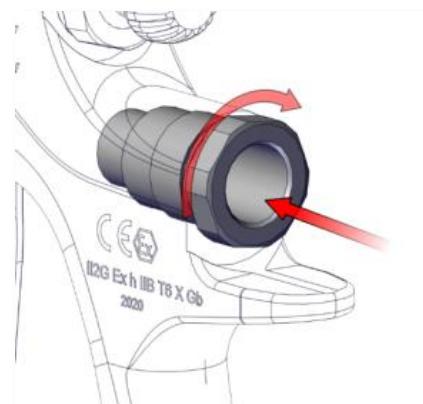

560440101 : 10 ML GREASE PTFE CARTRIDGE

Step 8

Put the liner in place.

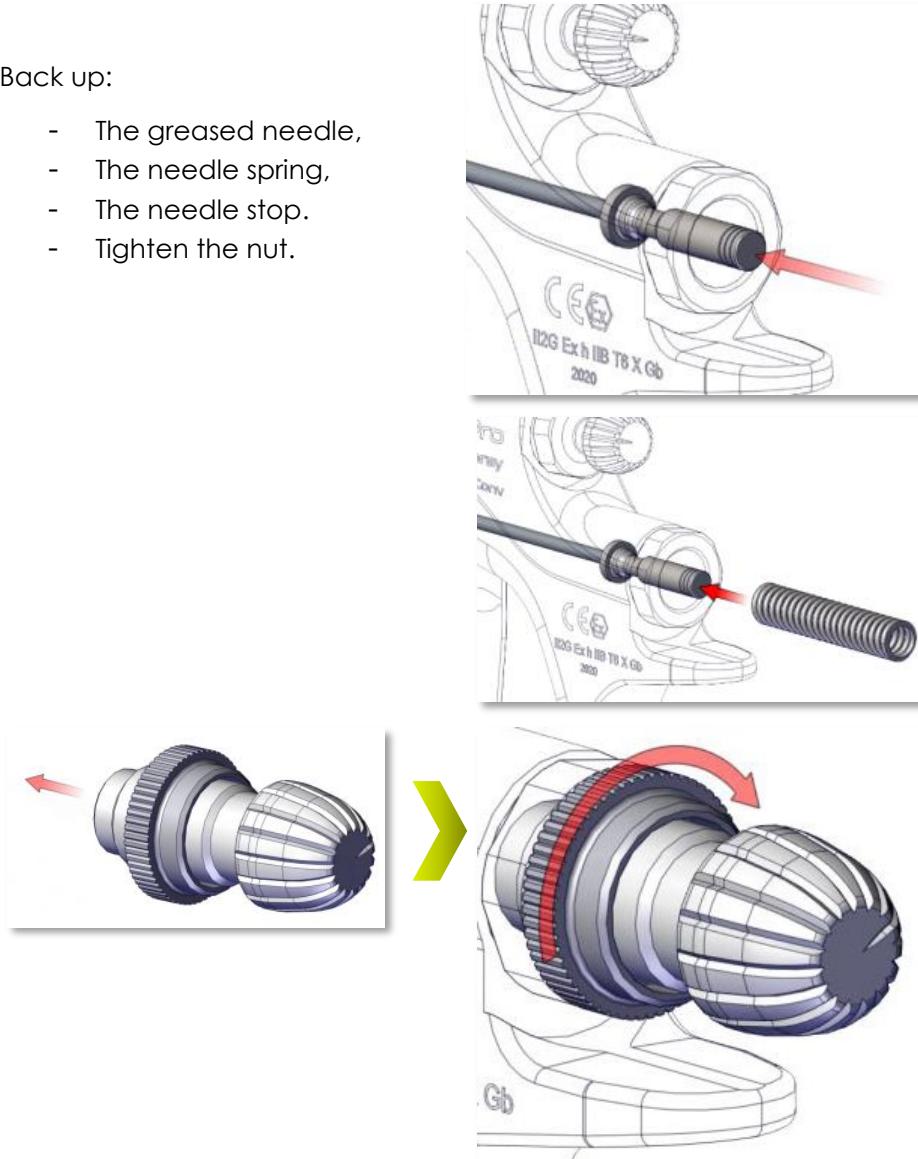

Screw on the liner.

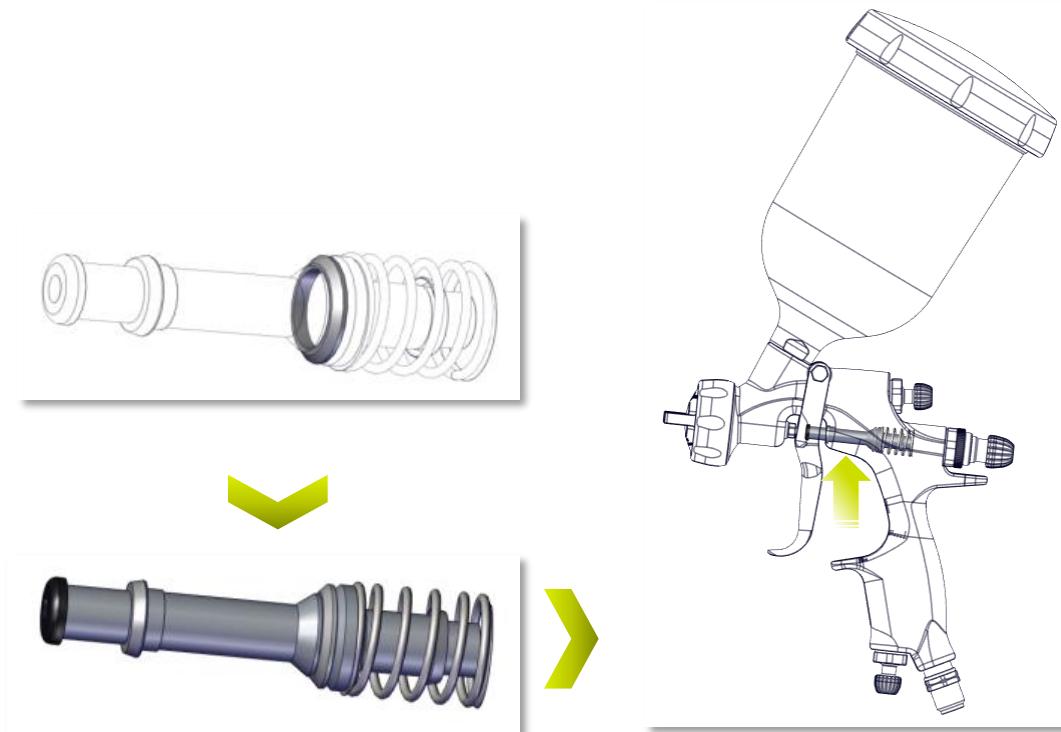

Step 9

Back up:

- The greased needle,
- The needle spring,
- The needle stop.
- Tighten the nut.

10.4.4 Replace air valve seal

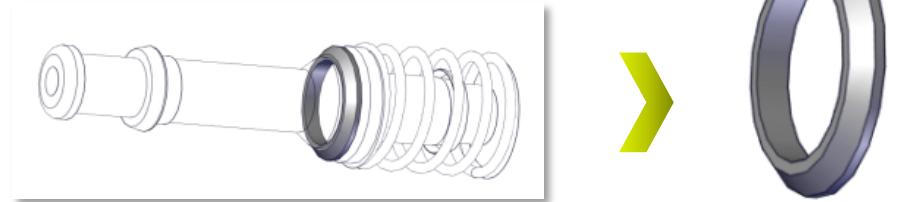

Step 1

Remove the air valve - see previous paragraph.

Step 2

Remove the seal.

Grease the new seal and place it in its housing.

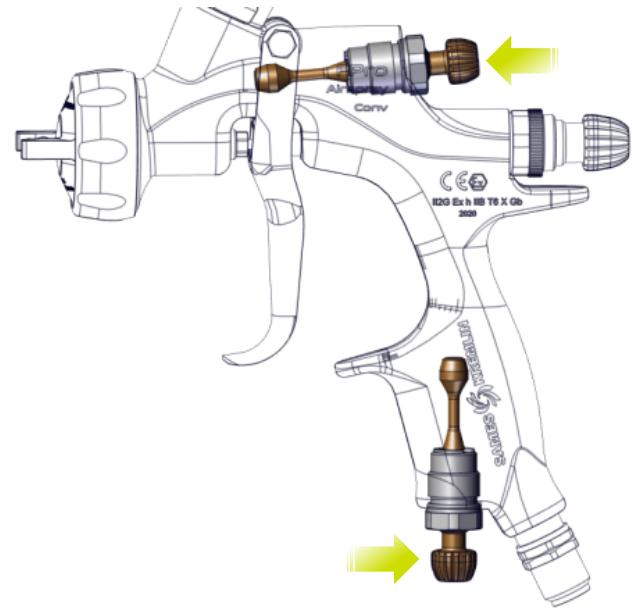

560440001 : PTFE grease 450 GR. box

560440101 : 10 ML GREASE PTFE CARTRIDGE

Important

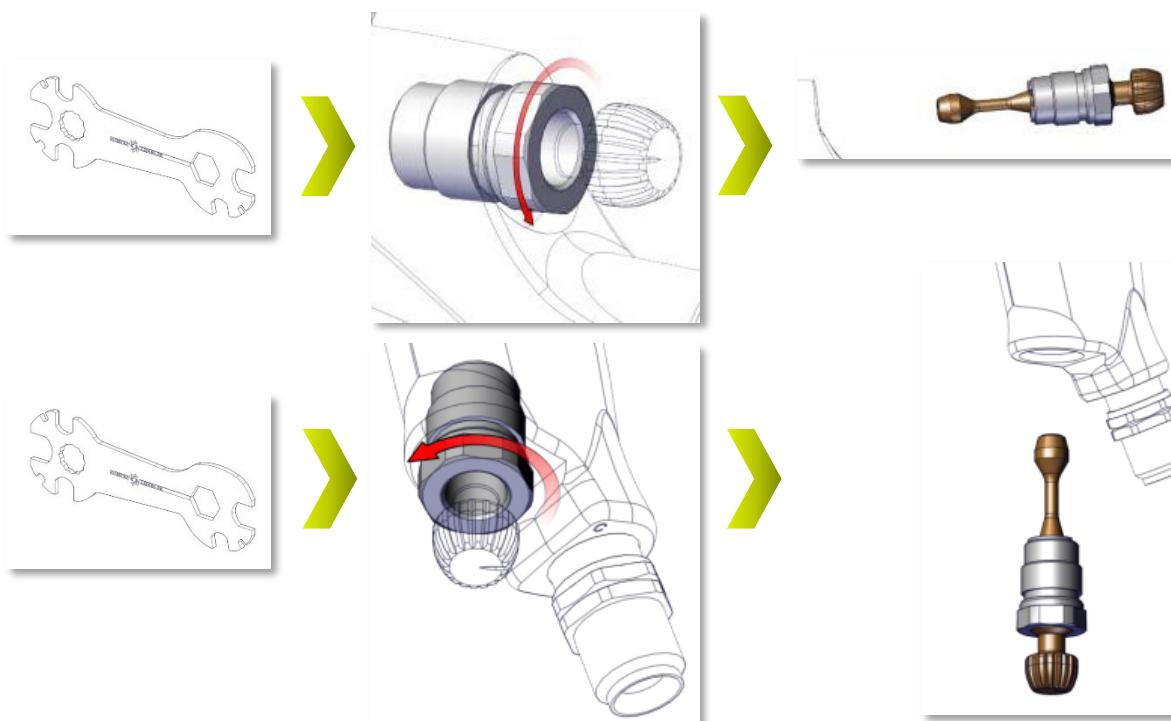

For reassembly, carefully insert the air valve into the gun body with a rotating movement so as to preform the valve seal.

10.4.5 Replace the air needle at events and the air needle at the grip.

Step 1

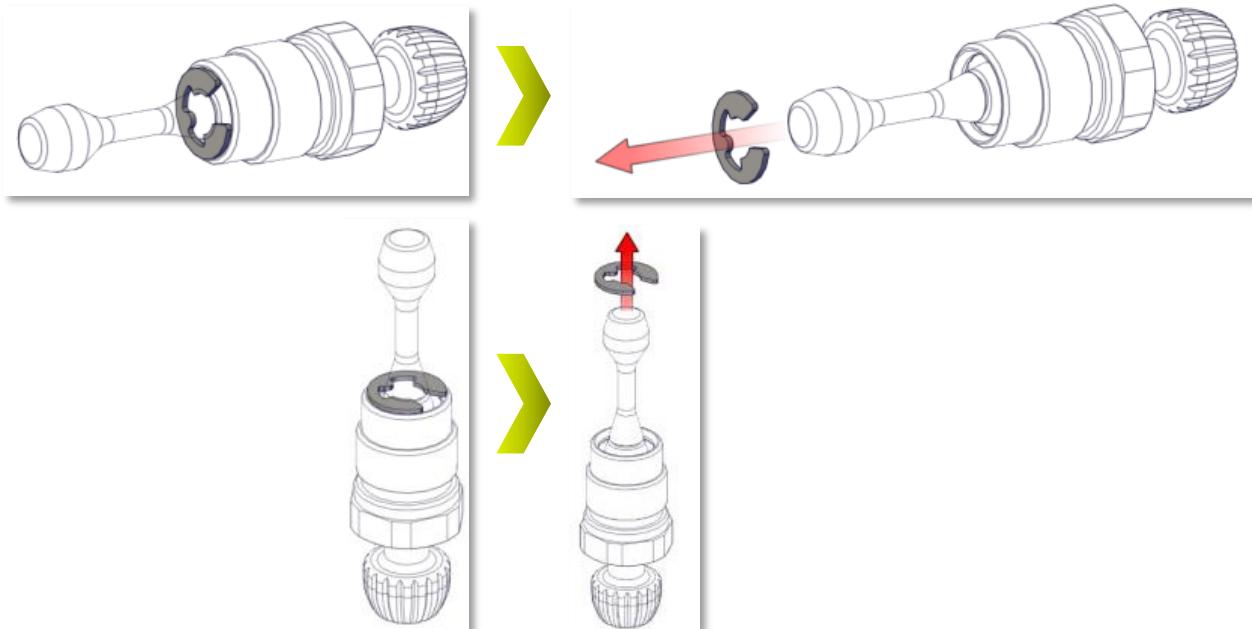

Unscrew the air needle at the vents and/or the air needle at the grip using the key supplied with the gun.

**The air needle must be in the "open" position before being mounted or dismounted from the gun.
Danger of damage to the needle and/or the gun body.**

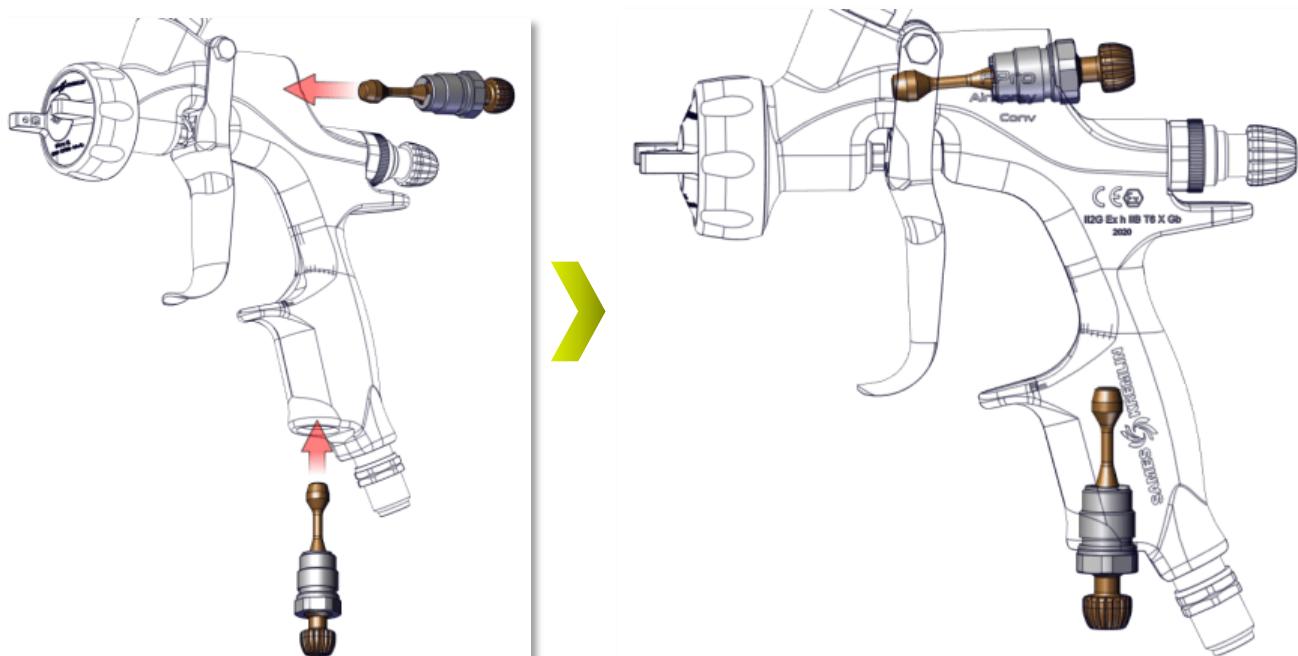

Step 2

Check the condition of the clip and change it if necessary.

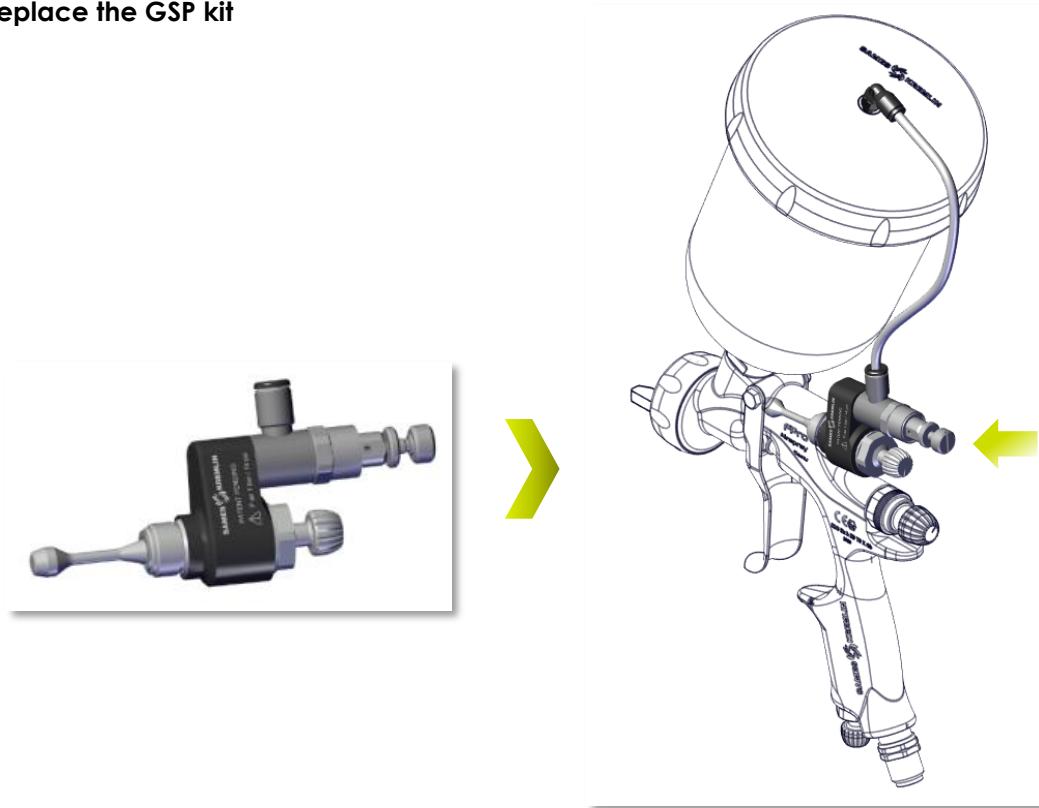

Step 3

Refit the new air needle to the air vents and/or the air needle to the stock - tightening torque: 10 Nm.

10.4.6 Replace the GSP kit

Objectives

Procedure to be carried out within the framework of maintenance.

Intervening staff

Qualified personnel.

Prerequisite

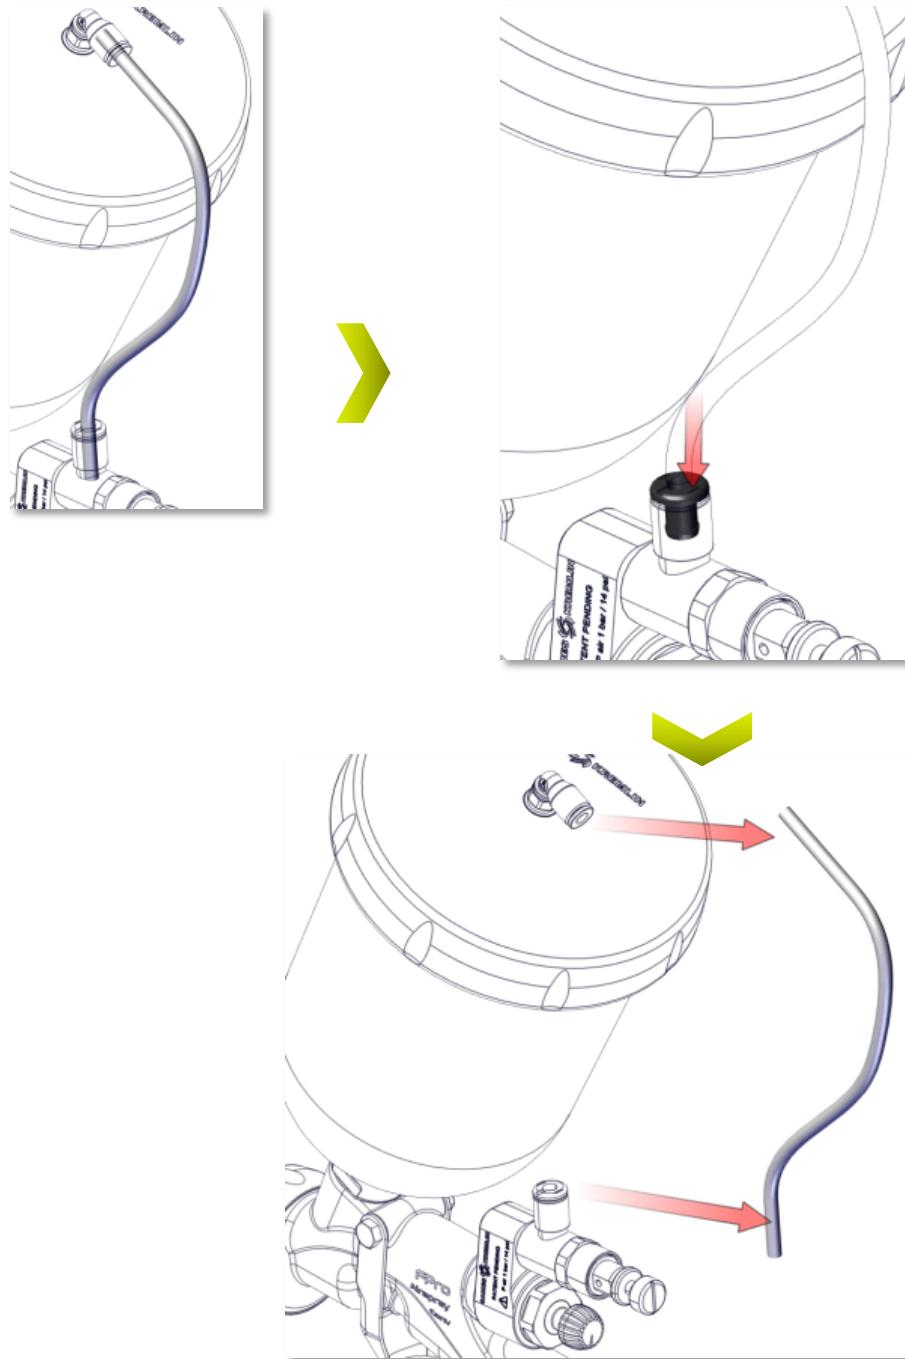

The GSP regulator kit must not be cleaned with solvents or immersed in solvents.

- Do not pull the trigger and open the cup lid at the same time.
- Maximum allowable pressure in the GSP cup: 1 bar / 14 psi.
- Only use regulator 903 130 605 with this GSP kit.
- The air needle must be in the "open" position before mounting or removing it from the gun.
- Risk of damage to the air needle and/or gun body.

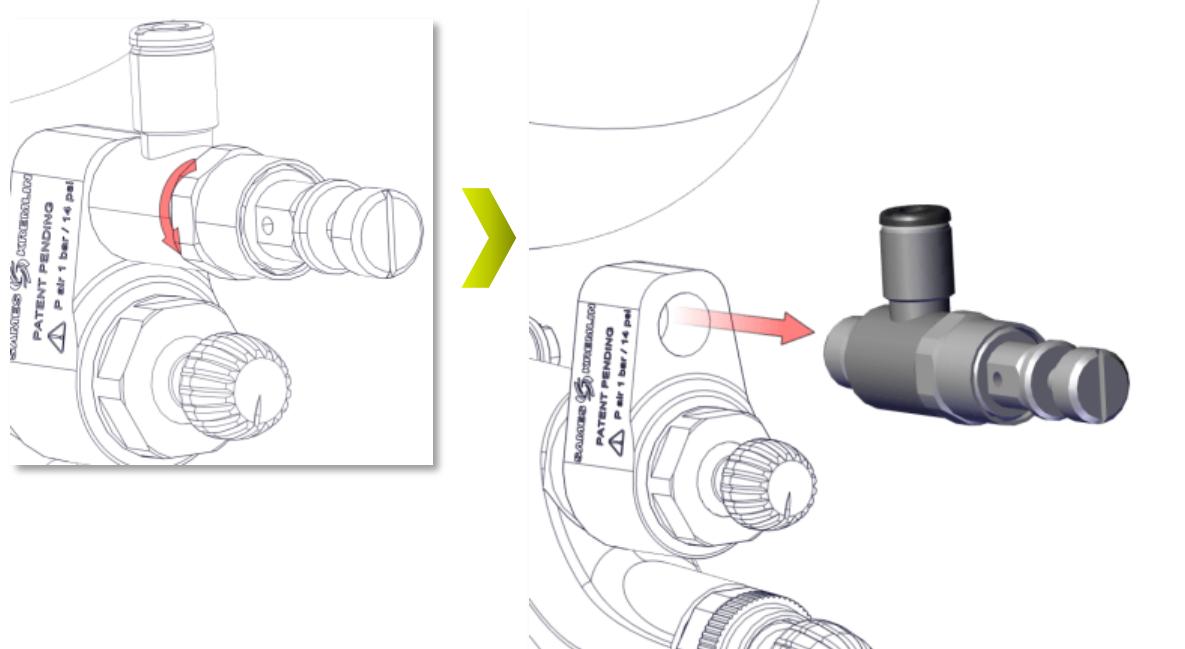

Step 1

To remove the hose, apply pressure from top to bottom on the arrowed element.

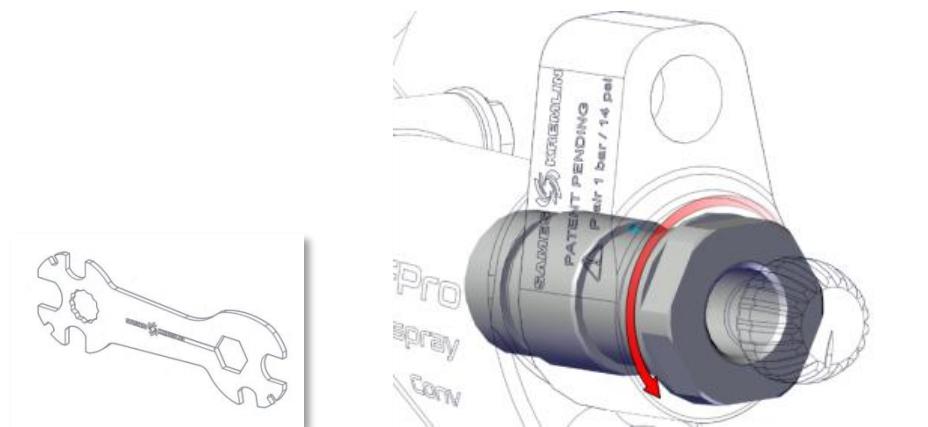

Step 2

Loosen the regulator.

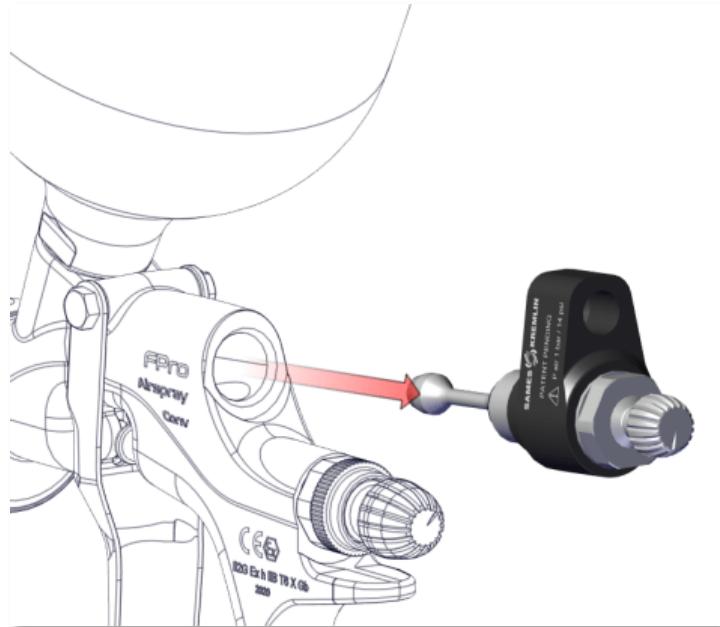

Step 3

Unscrew the air needle using the key supplied with the gun.

Step 4

Remove the ring and air needle assembly.

Step 5

Separate the ring from the needle.

Step 6

Remove both seals from the ring.

Step 7

Check that there are no deposits or residues in the ring chamber.

Blow a blower if necessary.

Grease the new seals and place them inside the ring.

560440001 : PTFE grease 450 GR. box

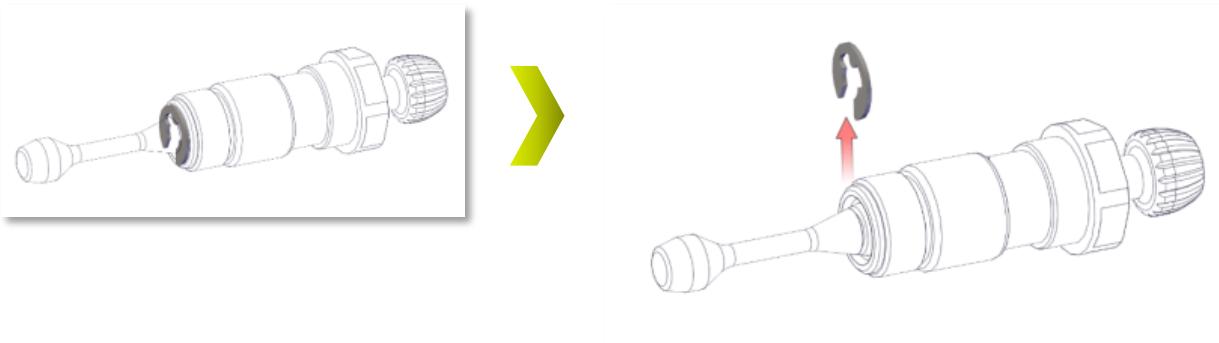

560440101 : 10 ML GREASE PTFE CARTRIDGE

Check the correct arrangement of the seals in the ring chamber.

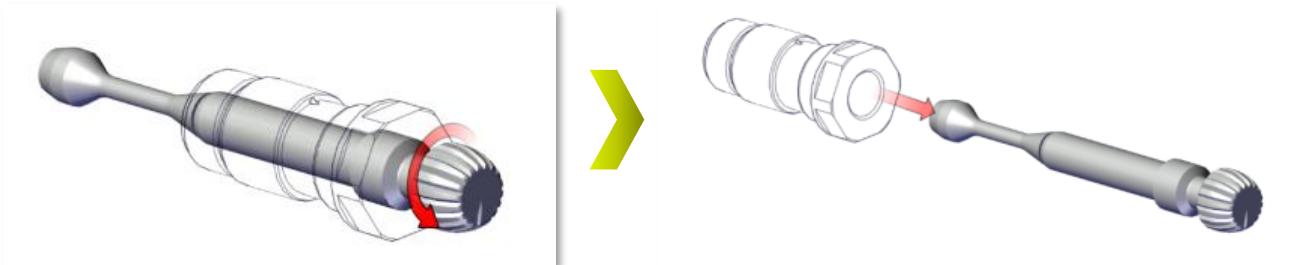

Step 8

Remove the circlip from the needle.

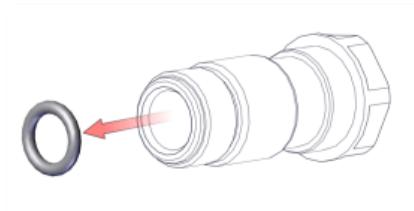

Step 9

Unscrew the needle to separate it from the liner.

Step 10

Remove the seal from the liner.

Use a flat screwdriver.

NOTE:

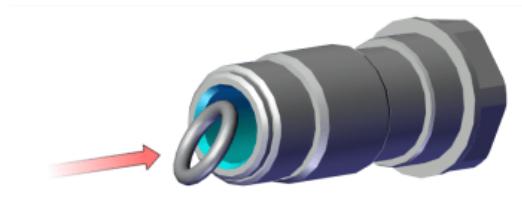

Be careful not to scratch the liner or damage the seal groove.
Possible residues or seal deposits caused by the removal of the seal with the screwdriver.

Step 11

Check that there are no deposits or residues in the liner.

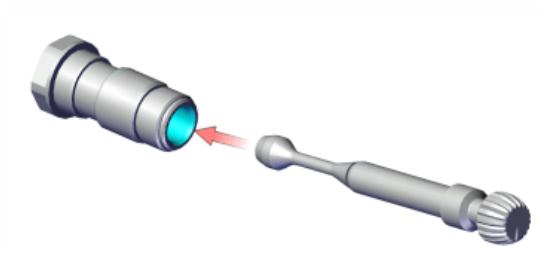

Blow a blower if necessary.

Place the seal in the liner at an angle of approximately 45 degrees.

Then seal it once in the liner:

Use the air needle to properly position this seal in the liner.

Apply grease to the air needle tip and its cylindrical body.

560440001 : PTFE grease 450 GR. box

560440101 : 10 ML GREASE PTFE CARTRIDGE

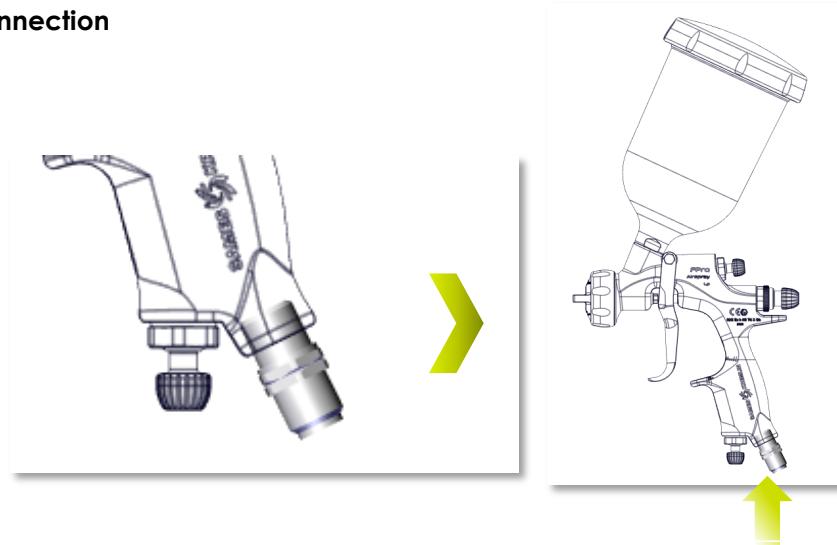

Then put the needle back into the liner according to its original position.

Step 12

Reassemble the GSP kit using the reverse procedure to that described in the previous steps of this procedure.

Check that the liner threads are properly engaged in the gun before tightening the liner with a wrench.

10.4.7 Replace the air connection

Reminder

Original equipment
Connection 1/4 NPS

Option
Connection 1/4 BSP,
(included in the accessories box)

Objectives

Procedure to be carried out within the framework of maintenance.
Adapt the air inlet fitting of the gun to the hose in place.

Intervening staff

Qualified personnel.

Step 1

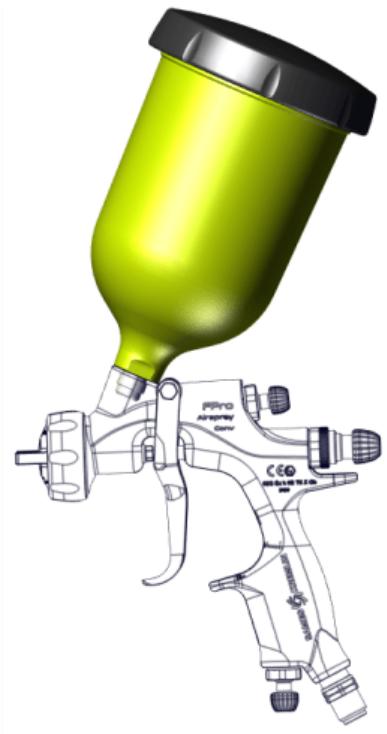

Unscrew the air connection from the gun body using the wrench supplied with the FPro G gun.

Step 2

Install the new air connection instead.

10.4.8 Replace the gravity cup

Objectives

Procedure to be carried out within the framework of maintenance.

Intervening staff

Replace a damaged cup or replace it by a disposable cup

Prerequisite

Check that the cup is empty.

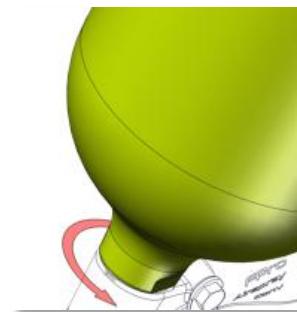

Step 1

Unscrew the lid with the cup.

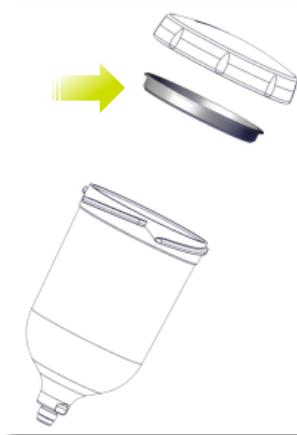

The cup is unscrewed by hand.

If resistance is encountered, unscrew the gravity cup at the connection using the wrench supplied with the gun.

Step 2

Extract the anti-drip membrane

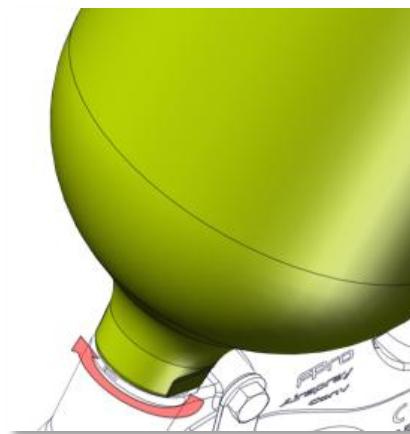

Step 3

Install the new anti-drip membrane.

Step 4

Screw on the gravity cup by hand.

10.5 Replace of defective parts

After a complete shutdown of the equipment, preventive maintenance can be performed according to the recommendations in the manual and using original SAMES KREMLIN spare parts or approved consumables.

11 Disposable cups: smart cups

Disposable or single-use cups are an alternative to the conventional gravity cup.

These cups are composed of a flexible pouch, a lid with filter, a holding ring and a cap.

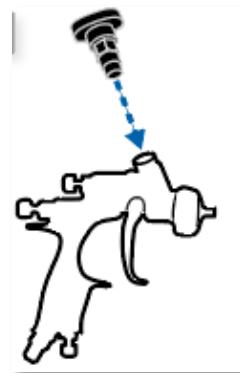

Refer to 12.4 Consumable references

11.1 Assembly instructions

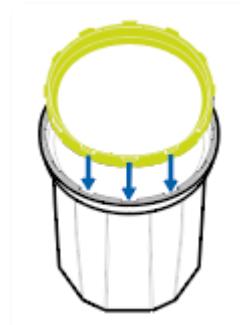

Step 1

Thread adapter to spray gun.

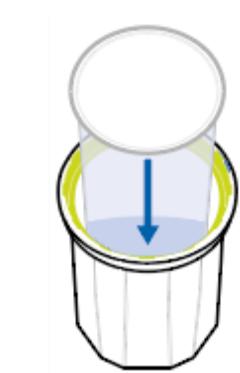

Step 2

Insert ring into dosing cup.

Step 3

Insert liner into ring.

Step 4

Pour the paint inside the liner. Be careful not to spill the paint on to the flange/ring.

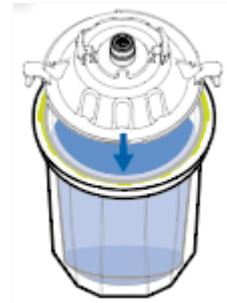

Step 5

Mix the paint with a stir stick.
Ensure that the paint has not coated the flange/ring before attaching the lid

Step 6

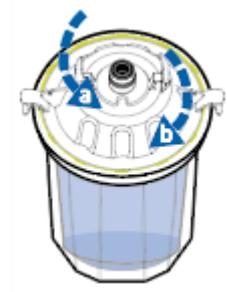

Seat lid into ring.

Step 7

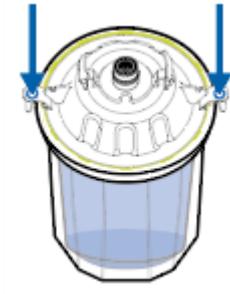

Install the lid in two steps:

- a) Rotate for 1/4 turn counter-clockwise until a "click" sound is heard.
- b) Then rotate lid clockwise until it is tight.

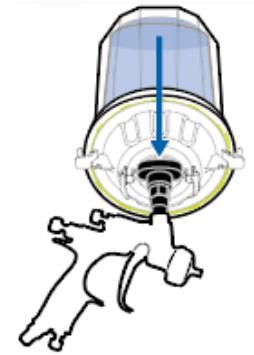

Step 8

Press the clamps on the lid down to secure it to the dosing cup.

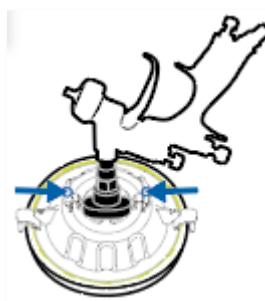

Step 9

Connect the cup assembly to the spray gun, perforating the membrane on the lid.

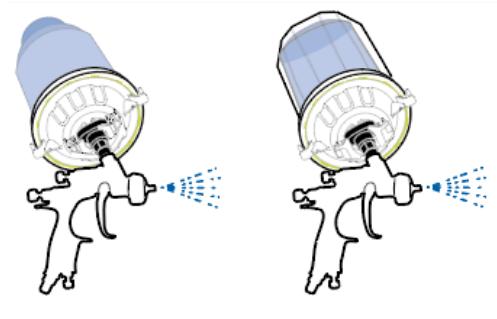

Step 10

Press the clamps on the lid to secure the lid to the adapter.

Step 11

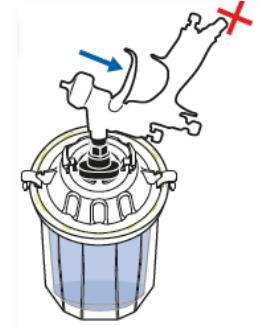

Optional: spray with,
or without
The dosing cup

11.2 Storage instructions

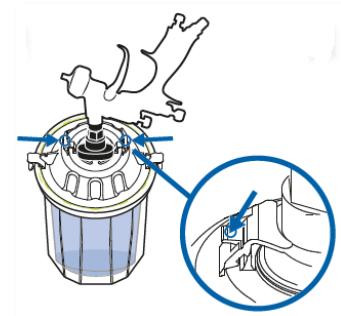

Step 1

Turn the paint gun upside down,
cup down, without air pressure,
and pull the trigger to purge the gun paint
remaining (in the paint gun will flow
into the disposable cup)

Step 2

Push the tabs down to release
adaptor locks

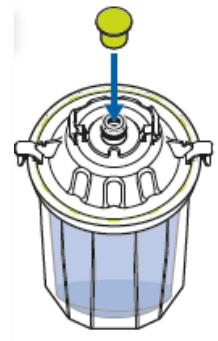

Step 3

Remove the gun with the adapter.

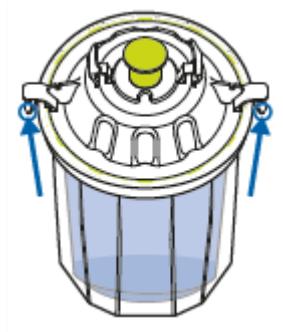

Step 4

Put the cap on the lid of the liner.

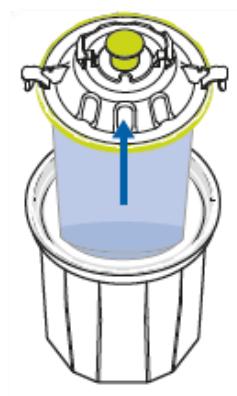

Step 5

Unclip the tabs from the dosing cup.

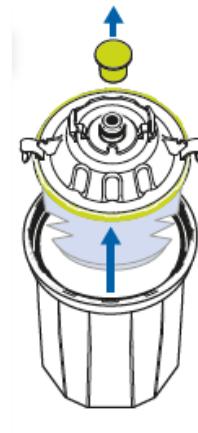

Step 6

Remove the liner from the dosing cup.

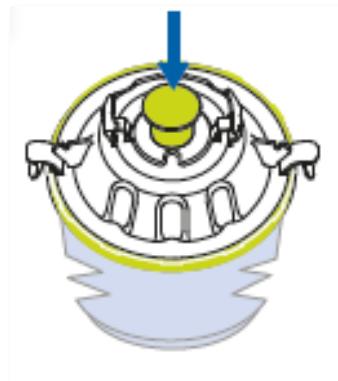

Step 7

Remove the cap and purge air by carefully compressing the liner while the opening is upwards.
Check that the paint permeates the filter.

Step 8

Put the cap on and store.

11.3 Disposal instructions

Repeat steps 1 to 6, then remove the liner.

No need to purge air before disposing of the liner

NOTE: Dispose in conformance with local rules and regulations.

12 Spare parts

Reminder: Assembly errors

The use of improper replacement or defective parts may result in hazards to personnel, damage, malfunction or general shutdown of the equipment.
